Executive Summary

On March 27, 2007 U.S. Secretary of State Condoleezza Rice reiterated her call for a "viable" Palestinian State. Before a viable Palestinian State can come into existence, the Palestinian Authority and Israel must come to certain agreements. It is understood that issues such as the political status of Jerusalem, the question of refugees, the Jewish settlements, the borders, and security arrangements locally and against long-range missiles (and weapons of mass destruction) are fundamental elements in any political agreement between Israel and the Palestinians. The idea of a territorial link between the Gaza Strip and the West Bank, commonly called the issue of 'safe passage,' is often overlooked. In the opinion of the authors this additional disagreement must be addressed if the peace process is ever to reach a successful conclusion. Safe passage, in turn, raises legal, economic, and security concerns for Israel as well as for the Palestinians.

International law, traditional and modern, posits that to be recognized as a state an entity must meet certain requirements. One is the need for a defined territory, although there is no prescribed minimum size of the territory. Further, it is not a requirement that the boundaries of the territory be fixed or certain. Accordingly, alterations to a state's territory, whether by increase or decrease, do not affect the identity of the state or compromise its existence.¹

What is vital to note is that the criterion of a defined territory does not require that the state possess geographical unity. Stated in the positive, a state may consist of disconnected territorial areas. Thus scores of states are comprised of a mainland and islands, such as Australia. In addition, and of particular relevance to this monograph, a state may be comprised of separated territories between which lies territory of a foreign sovereign entity. For example, the United States and its state of Alaska are separated by approximately 500 miles of Canadian territory.² In fact for the sake of this monograph we have identified nine such examples of non-contiguous states, which will be discussed below.

The lack of a link between separated territories does not affect whether a new political community should be recognized as a state under international law. In addition, based on past and present international practice, a state does not possess an inherent right to a link between its geographically distinct areas. In particular, this may be applied to the sovereign link called for by the Palestinians between Gaza and the West Bank.

From 1948 to 1967 the Gaza Strip was controlled by Egyptian military rule. During that period the West Bank was occupied by Jordan. Thus for almost twenty years, there was no connection between these two territories. After Israel captured these areas in the 1967 Six-Day War, U.N. Security Council Resolution 242, which was adopted in November 1967 to recommend a resolution of the final status of the territories, made no mention of a territorial link between Gaza and the West Bank. What is essential is the control of territory -- that the state constitutes a certain coherent territory that is effectively governed.³

The Oslo Accords of the 1990s and specifically the Declaration of Principles outlined the interim self-governmental arrangements agreed to by Israel and the PLO (which would become the Palestinian Authority). These included immediate Palestinian self-rule in Gaza and Jericho, early empowerment for the Palestinians in the West Bank, and an agreement on self-government and the election of a Palestinian legislative council.⁴ Shortly after the DOP was signed, negotiations began between the parties concerning the implementation of the first stage of the DOP, which was Palestinian self-rule in Gaza-Jericho. These negotiations resulted in the Gaza-Jericho Agreement (Cairo Agreement) that was signed on May 4, 1994.⁵ The notion of safe passage is first mentioned in the Oslo-era Gaza-Jericho Agreement Article on security arrangements, one of four main issues that the agreement addresses.⁶

Today, there is very widespread international support for the creation of a Palestinian State. It is therefore likely that less will likely be demanded of the nascent Palestinian entity in terms of adherence to the criteria for statehood.

In light of the complex relationship between recognition and statehood, and the overwhelming recognition a Palestinian entity aspiring to statehood would likely enjoy, it would probably be recognized as a state in spite of its not being territorially contiguous. This, even if territorial contiguity was a requirement for statehood.

To reiterate, the lack of a link between separated territories does not affect whether a new political community should be recognized as a state under international law. In addition, based on past and present international practice, a state does not possess an inherent right to a link between its geographically distinct areas. In particular this may be applied to the sovereign link called for by the Palestinians between Gaza and the West Bank.

Palestinian aspirations for statehood are complicated by their implications for Israeli security.

The security threat has been aggravated in recent years by the Palestinian Authority's (PA's) loss of control, in particular, over the Gaza Strip.

Waves of anarchy, chaos, and lawlessness have overtaken the area, and according to a senior Palestinian official, "[t]he situation in the Palestinian Territories is very dangerous because we (the PA) are no longer in control."⁷

On January 5, 2005, this chaos spilled into Egypt, with Fatah gunmen in Gaza opening fire at Egyptian army posts after the gunmen demolished parts of the concrete wall on the border between Egypt and Gaza. The Fatah gunmen killed two Egyptian border guards and wounded at least thirty.⁸

Even the media have come under attack. Fatah gunmen threatened to shut down the offices of the pan-Arab Al

Arabiya satellite TV station in the Gaza Strip and West Bank after accusing it of 'defaming' Palestinian female suicide bombers and their families in a documentary aired on the station concerning female suicide bombers in Iraq, Russia, Afghanistan, and the Palestinian Territories. Leaflets distributed by Fatah's armed wing demanded an apology from the station within 24 hours, failing which they threatened to close its offices.⁹ Such attacks on the media are commonplace in the Palestinian Territories. For example, Saif Eddin Shaheen, a correspondent for Al Arabiya in the Gaza Strip, was beaten in 2004, and was told by one of his attackers, who identified himself as a member of Fatah, that he would "teach him a lesson in journalism."¹⁰ The situation has deteriorated further with journalists in the West Bank and Gaza having received death threats because of their coverage of the state of lawlessness and anarchy in PA controlled areas.¹¹ These attacks included the August 14, 2006 kidnapping of Fox News journalists Steve Centanni and Olaf Wiig. They were held in Gaza for two weeks and forced to 'convert' to Islam at gunpoint.¹² Even PA security officials have acknowledged that journalists are being subjected to a vicious campaign of intimidation.¹³

Indeed, Dr. Jamal Majaideh, a prominent political analyst from the Gaza Strip, likened the situation in the Palestinian Territories to "Taliban-controlled areas in Afghanistan and farms controlled by Jordanian-born terrorist Abu Musab Zarqawi in Iraq."¹⁴ More haunting, however, is the comparison made by Palestinian newspaper editor Hafez Barghouti. He likened the situation in Gaza to that which existed in Somalia in the 1990s. Barghouti stated that "[t]he recurring attacks on PA institutions and kidnappings of foreigners makes it look as if we are competing with the warlords and militias in Somalia over who would win the 'Nobel Prize for Anarchy.'" The ongoing anarchy, most severe in Gaza, coupled with the unwillingness or inability of Palestinian President Abu Mazen to take even the most rudimentary steps to restore order accentuates the venomous impact a safe passage arrangement could have by facilitating the spread of Gaza's lawlessness into the West Bank and ultimately to Israel.

Masked Fatah gunmen have occupied various PA government buildings, including the Ministries of Interior, Economy, and Communications, demanding jobs and money. Fatah gunmen also blocked the entrance to the Rafah crossing, preventing passage through the terminal. They even confiscated the diplomatic passport of the PA's Ambassador to Pakistan, a Muslim country that has always supported the Palestinian cause, and opened fire on his vehicle, causing him and his wife to flee the scene.¹⁵ Further, approximately 100 PA security officers went on a rampage at the Rafah crossing on December 30, 2005, forcing the unarmed European monitors to flee to a nearby Israel Defense Forces (IDF) base.¹⁶ That same day a 14-year-old Palestinian boy was inadvertently killed by dozens of gunmen who attacked a PA police station in Gaza in an attempt to release a friend arrested a day earlier.¹⁷

The Philadelphi Corridor, which is a seven-mile-wide military zone that runs along the Egyptian border, separates the Palestinian-controlled Gaza Strip from Egyptian towns, making it a crucial area for the transfer of arms into Gaza.¹⁸ The use by terrorists of the Philadelphi Corridor, and the possible use of a future 'safe passage,' raises serious security concerns for Israel.

On September 1, 2005, Egypt and Israel signed the Agreed Arrangements Regarding the Deployment of a Designated Force of Border Guards along the Border in the Rafah Area (the Agreed Arrangements), which allowed Israeli forces to evacuate the corridor through the deployment of Egyptian border patrol forces on the Egyptian side of the border.¹⁹ Several months later Yuval Diskin, head of the Shin Bet (Israel's domestic security agency), told the Knesset Foreign Affairs and Defense Committee that "[t]he amount of explosives smuggled into the Gaza Strip from Egypt has grown drastically, by more than 300 percent."²⁰ On the basis of these statistics, Diskin said that "[i]t is clear that our withdrawal from the Philadelphi Corridor and our reliance on the Egyptians has proven to be a failure."²¹

Entry into the West Bank effectively amounts to entry into Israel, at least until the completion of the security

fence, since large parts of the West Bank security fence are yet to be finished. Thus, with arms and terrorists being smuggled from Egypt into Gaza, and a possible safe passage modality enabling transit to the West Bank, all forms of attacks in Israel (and from the West Bank) are likely to increase.

Some have suggested that the presence of European Monitors as part of the Border Assistance Mission could assuage the threat to Israel. The ambitious hope that these monitors could secure the border ignores the fact that they are unarmed and have already come under attack. These European Monitors could further dissipate as other monitoring programs in the region and elsewhere have in the past. Historically, Israel's off-putting experiences with various U.N. peacekeeping missions have made the country wary of relying on these forces. In 1967, United Nations Emergency Force I was withdrawn at the precise moment it was most needed, when Egyptian President Nasser was massing troops in Sinai just before the outbreak of the 1967 war. The United Nations Interim Force in Lebanon (UNIFIL 1) mission in Lebanon from 1978 onward had a vague mandate that proved impossible to carry out; it too failed.²²

The Temporary International Presence in Hebron (TIPH), which encouraged high hopes at its inception in May 1994, was the first attempt at a unique peacekeeping mission designed to promote stability and normalization in Hebron. The TIPH mission was forced to withdraw from Hebron in August 1994 following the failure of the Palestinian Liberation Organization (PLO) and Israel to reach an agreement on its extension.²³ Although a second TIPH mission with modified goals has proven longer-lasting, this unarmed mission too was forced to withdraw when its headquarters came under attack by a Palestinian mob incensed by the controversy over Danish cartoons portraying the prophet Muhammad in a very unfavorable light. The difficulty in achieving even minor success with a peacekeeping force in this region is again apparent from the failure of UNIFIL 2 to stem the flow of weapons from Syria across the Lebanese border to Hezbollah, as required by U.N. Security Council Resolution 1701.²⁴ All of this suggests that one

must be realistic about the probable achievements of any monitoring force along Israel's border with Gaza and the West Bank.

PA President Abu Mazen (Mahmoud Abbas) characterizes himself as a moderate. He opposes anarchy in the disputed territories but his intentions have had little, if any, impact. When Yasser Arafat died many people hoped that Abu Mazen would create a new reality. He encouraged these desperate hopes with his electoral slogan "[o]ne law, one authority, one gun."²⁵ In fact, the reality on the ground has been just the opposite. When called upon to act against gangs of armed terrorists, thugs, and criminals, Abu Mazen has chosen to attempt to talk them into co-operating with the PA. These efforts have been to no avail, leaving Abu Mazen's abovementioned promise unfulfilled and his credibility in tatters.

Further, the Shin Bet has reported that to its knowledge between September 12 and 18, 2005, over five tons of explosives, 200 anti-tank grenades, 350 anti-tank rockets, and an unspecified number of anti-aircraft missiles were smuggled into Gaza from Egypt.²⁶ This overrode the self-declared 'truce' announced by the Palestinian terrorist organizations in January 2005.²⁷ Extrapolated over the period of a year, 240 tons of explosives, 9,600 anti-tank grenades, and 16,800 anti-tank rockets would have been smuggled into Gaza. Additionally, these figures ignore the weapons manufactured by Palestinians in Gaza, such as Qassam rockets.

The acid test of Palestinian President Abu Mazen's leadership will be if he can effectively demonstrate that he can prevent the smuggling of weapons and explosives into Israel from Gaza through the Karni crossing.²⁸ The amount of explosives typically required for a suicide belt is estimated to be between seven and ten kilograms. These explosives are typically mixed together with an array of metal objects such as nails and ball bearings.²⁹ During the Second Intifada over a thousand Israelis were killed and thousands more injured as a result of suicide bombings in which the perpetrators strapped explosives to their bodies. Given the quantities of explosives

smuggled from Egypt into Gaza, Palestinian terrorist groups could detonate truly frightening numbers of bombs of various types. Indeed, car bombs can be even more devastating. For example, on October 21, 2002, fourteen Israelis were killed and some 40 were wounded by a car packed with approximately 90 kilograms of explosives.³⁰

The prospect of increased attacks is formidable: 309 attacks employed Qassam rockets in 2004³¹ and there were 1,231 mortar attacks in the same year.³² The Shin Bet reported that during 2005 the number of Qassam attacks increased to 337 although mortar shelling fell to 848 incidents. Due to Israeli vigilance and the partially effective Palestinian truce,³³ suicide bombings declined from 1,231 in 2004 to 199 in 2005.³⁴ There were also 1,133 shooting incidents in 2005 as compared to 1,621 during the previous year.³⁵ Despite these decreases in the overall number of attacks in the year 2005, no country would tolerate this level of risk to its civilian population centers or strategic infrastructure. In light of these security considerations and the violations of the Rafah 'agreement' reached between the parties, Israel halted the plans to escort Palestinians and goods from the Gaza Strip to the West Bank in bus and truck convoys, respectively.³⁶ As an op-ed in the *Jerusalem Post* explained, "convoys and Qassams³⁷ cannot flow at the same time."³⁸

Contrary to the widely-held conviction that to be viable a state must be contiguous, in-depth research reveals that viability is a function of several different factors. Israel has legitimate security concerns arising out of the various proposals for implementing safe passage. Although some insist upon a territorial link between the West Bank and the Gaza Strip, which would be in derogation of Israeli sovereignty, Israel is not required to accede to this unprecedented demand. If the Palestinians were to constructively address these concerns, such as by dismantling the terror infrastructure as required by the Roadmap, Israel's anxiety could be assuaged. Israel would then be more forthcoming in bilaterally negotiating the ways and means for safe passage of Palestinian persons and goods.

Introduction

Especially following the unilateral Israeli withdrawal from the Gaza Strip during the summer of 2005, legal scholars and policy makers have increasingly turned to the question of the viability of the future Palestinian State. Terms such as 'territorial contiguity,' 'territorial continuity,' 'territorial connectivity,' 'a viable state,' and 'safe passage' are commonly employed in references to the future state of Palestine, which will comprise two territorial areas. One area of the state will be in the Gaza Strip and the other will be in the West Bank. Approximately twenty miles of the Negev, the southern region of Israel, will separate the two territories. The usage of the aforementioned terms can imply that some form of a territorial link between the Gaza Strip and the West Bank is necessary and/or desirable. Before reaching any conclusions on this weighty and controversial issue, international law ought to be considered carefully. Is a territorial link indeed required as one of the characteristics of statehood under international law?

It is understood that issues such as the political status of Jerusalem, the question of refugees, the Jewish settlements, the borders, and security arrangements locally and against long-range missiles (and weapons of mass destruction) are fundamental elements in any political agreement. The idea of a territorial link between Gaza and the West Bank, commonly called the issue of 'safe passage,' is often overlooked. In the opinion of the authors this additional dispute must be addressed if the peace process is ever to reach a successful conclusion. The question of safe passage raises legal, economic, and security concerns for Israel as well as for the Palestinians.

Although ignored in international legal literature, the subject of safe passage has increasingly come to the fore. Since Israel's disengagement from the Gaza Strip, it has conducted negotiations with the Palestinians over the Rafah crossing checkpoint between Egypt and the Gaza Strip. A US-brokered agreement provides for 'Gaza-West Bank Convoys' for the movement of goods

and people between the West Bank and the Gaza Strip.³⁹ However the convoys agreement was never implemented by Israel as the PA failed to act against terrorism.⁴⁰ These developments bolstered the credibility of the Palestinian entity as a nascent state. However paradoxically, these same events could threaten Israel with increased terrorism. The instrumentalities designed for the movement of civilians and goods could be employed by terrorists and weapons smugglers.

This threat has already materialized at the Rafah crossing with Egypt.⁴¹ In December 2005, the United States, European Union, and Israel expressed concern over the entry of up to 15 militants, among them the brother of Hamas leader Mahmoud Zahar, into Gaza.⁴² The Palestinians launched an investigation in response to these concerns. On March 29, 2006, a *Jerusalem Post* article declared that a Katyusha rocket fired into Israel from the Gaza Strip was smuggled through the Egyptian border. The Rafah border crossing, according to military officials, was "left 'wide open' by European observers and the Palestinians, allowing for the entry of senior Iranian and Syrian terror suspects" along with increasingly longer-range weapons.⁴³

During the 2006 Lebanon war both Hamas and Fatah demonstrated support for Hezbollah's missile attacks against the civilian population centers in northern Israel.

Longer-range missiles, such as those fired by Hezbollah at the civilian populations of Haifa, Tiberias, and Hadera, have been smuggled from Egypt into Gaza via the Rafah crossing.⁴⁴ Fired from Gaza and, all the more so from the West Bank, these missiles would be able to strike almost everywhere in Israel, including the Tel Aviv and Jerusalem metropolitan areas, not to mention Israel's industrial, commercial, and military infrastructures.

A masked terrorist of the Al Quds Brigade, the Islamic Jihad terrorist wing, participates in a training session in Gaza City. (AP Photo)

Hamas' victory in the Palestinian elections in 2006, and the changing realities that the election brings to the region, make the subject of safe passage even more critical to the dialogue within policy-making communities today. The creation of a safe passage is controversial in large part because the decisive U.N. Security Council Resolution addressing efforts to resolve the Arab-Israeli conflict, Resolution 242,⁴⁵ makes no mention of any safe passage regime. This suggests that such passage may not be required by international law: Resolution 242 was not adopted under Chapter VII of the U.N. Charter as an "action with respect to threats to the peace, breaches of the peace and acts of aggression," meaning it is not legally binding.⁴⁶ Rather, it was adopted under Chapter VI, dealing with "peaceful resolution of disputes," which states, "the parties to any dispute...shall, first of all, seek a solution by negotiation, enquiry, mediation, conciliation, arbitration...or other peaceful means of their own choice."⁴⁷ Such resolutions set out the situation that the U.N. would wish to see eventually in the country or countries in question, but leave its details and implementation to the states concerned.

The focus of this monograph will be the issue of 'safe passage.' Part I will examine the doctrine of statehood. It will analyze the traditional criteria for statehood as set out in the Montevideo Convention of 1933, as well as additional modern criteria. Part II will consider 'safe passage,' and analyze what it and its terminology means, and the implications of these terms. Israel's security considerations in the context of 'safe passage' will be examined in Part III. Part IV will examine the term 'viability,' and whether a non-contiguous state can in reality be viable, and particularly a Palestinian State. This analysis will include a consideration of present and past examples of non-contiguous states. These topics will be followed by the authors' Conclusion.

I. The Doctrine of Statehood

A. The Traditional Criteria for Statehood as Enunciated by the Montevideo Convention of 1933

States are the principle subjects of international law. Despite the fact that states are primary actors in the field of international law, there is no universally accepted definition of the term 'state.'

Given that there is a legal concept of statehood, the law must have a means by which one can identify entities as states.⁴⁸ In other words, there must be criteria for statehood. The most definitive formulation of the basic criteria for statehood was established in Article I of the Montevideo Convention on the Rights and Duties of States, 1933. This reads as follows, "[t]he State as a person of international law should possess the following qualifications: (i) a permanent population; (ii) a *defined territory*; (iii) a government; and (iv) a capacity to enter into relations with other states."⁴⁹ (emphasis added)

There is a fifth criterion that is not specifically mentioned in the Montevideo Convention, but which many academics believe to be implied in the fourth criterion. The argument is that independence is implied from the fourth criterion since without independence, an entity cannot operate fully in the international sphere.⁵⁰ These five criteria will each be discussed, but emphasis will be placed on the second (a defined territory).

However, before undertaking such an analysis, it is crucial to note that these criteria are neither exhaustive nor immutable. Other more contemporary factors

may also be relevant, such as self-determination and recognition, which will be discussed below. Moreover, the weight placed on the respective criteria may vary in differing situations.⁵¹

1. Criterion i: A Permanent Population

The first criterion for statehood is that of a permanent population. This connotes a stable community of people who identify themselves with a specific territory. The size of the population is of no consequence.⁵² Who actually belongs to the population of a state is determined by the municipal law on nationality.⁵³

2. Criterion ii: A Defined Territory

The second criterion of statehood (and the one with which this monograph is most concerned) is that of a defined territory. States are quite clearly territorial entities and, as such, need a territorial base from which to function. There are various conflicting theories as to the relationship between a state and its territory,⁵⁴ but control of territory represents the essence of a state.

While there is a need for a defined territory, there is no prescribed minimum size of the territory. Indeed, one finds both very large and very small states.

Russia is 6,592,771 square miles; 1.8 times the size of the United States. Tuvalu, an island group in the South Pacific Ocean, is only 10 square miles, some 0.1 times the size of Washington, DC. Nauru, an island in the South Pacific Ocean, is only 8.2 square miles.

Further, it is not a requirement that the boundaries of the territory be fixed or certain. Although defined territory implies this, it is not the case. This was confirmed by the German Polish Mixed Arbitral Tribunal in the *Deutsche Continental Gas-Gese Uschaft v. Polish State* case. The tribunal held that, "Whatever may be the importance

of the delimitation of boundaries one cannot go so far as to maintain that as long as this delimitation has not been legally affected the state in question cannot be considered as having any territory whatsoever.... In order to say that a state exists....[i]t is enough that this territory has a sufficient consistency, even though its boundaries have not yet been accurately delimited and that the state actually exercises independent public authority over that territory." ⁵⁵

The State of Israel further demonstrates this principle. The State was admitted to the United Nations in 1948 despite border disputes that continue even today. Accordingly, alterations to a state's territory, whether by increase or decrease, do not affect the identity of the state or its existence.⁵⁶ Lest one be tempted to assume that these disputes are antiquated or marginal, it is advisable to note that organizations such as Hamas,⁵⁷ Hezbollah,⁵⁸ Palestinian Islamic Jihad⁵⁹ and even the State of Iran⁶⁰ openly deny Israel's right to exist regardless of its dimensions.

What is vital to note is that the criterion of a defined territory does not require that the state possess geographical unity. Indeed, a state may consist of disconnected territorial areas.

Many states are comprised of a mainland and islands, such as Australia, which consists of the mainland and islands including Tasmania, Norfolk, and very distant islands like Christmas and Keeling. A state can also comprise many islands. The Marshall Islands are two archipelagic island chains of 30 atolls and 1,152 islands. Indonesia is the world's largest archipelago with 17,508 islands. These states, and many others are not geographically united.

The United States and its state of Alaska are separated by approximately 500 miles of Canadian territory.⁶¹ In fact, we have identified nine such examples of non-contiguous states, which will be discussed below.

The lack of a link between separated territories does not affect whether a new political community should be recognized as a state under international law. In addition, based on past and present international practice, a state does not possess an inherent right to a link between its geographically distinct areas. In particular this may be applied to the sovereign link called for by the Palestinians between Gaza and the West Bank.

From 1948 to 1967 the Gaza Strip was controlled by Egyptian military rule. During that period the West Bank was occupied by Jordan. Thus for almost twenty years, there was no connection between these two territories. After Israel captured these areas in the Six-Day War, U.N. Security Council Resolution 242, which was adopted in November 1967 to recommend a resolution of the final status of the territories, made no mention of a territorial link between Gaza and the West Bank. What is essential is the control of territory -- that the state constitutes a certain coherent territory that is effectively governed.⁶²

Theoretically, it appears as if contiguity, to be discussed below, is not an indispensable prerequisite for statehood, or a state's inherent right. However, legal theory is not the only consideration involved in the issue of 'safe passage.' The possibility of creating a non-contiguous state raises additional concerns to be discussed below.

3. Criterion iii: Government

The third criterion cited in the Montevideo Convention is that of a government. Effective government is crucial to an entity's statehood. However, it is uncertain what is meant by the term government, given the various forms of government. It appears that what is required is a complete system of institutions regulating all aspects of life within the territory under government control. Effective governance may be determined by the degree

of calm or chaos within the territory. If, for example, a civil war breaks out, the effectiveness of the institutions is doubtful.⁶³

The requirement of effective government actually has two aspects: the actual exercise of authority, and the right or title to exercise authority. The distinction can be illustrated by reference to Finland and the Congo respectively. Finland had been an autonomous part of the Russian empire since 1807. After the November Revolution of 1917, Finland declared its independence. Its territory was thereafter the subject of numerous military actions and interventions. Order was only restored some time after the declaration of independence.⁶⁴ Given this, the International Committee of Jurists appointed to investigate the status of the islands in the *Aaland Islands* dispute held with respect to Finland that "for a considerable time, the conditions required for the formation of a sovereign State did not exist."⁶⁵ The Commission of Rapporteurs disagreed with the finding of the Jurists on this point, not because they believed that Finland had an effective government, but because of the importance that they attached to Soviet recognition of Finland, and because of Finland's continuity before and after 1917. In this case, they chose not to apply the rather stringent rule relating to effective government in a new state.⁶⁶ Thus, Finland was recognized as a state in 1917, despite a lack of effective government.

With respect to the second element -- the right or title to exercise authority -- reference can be made to the case of the *Congo*.

Prior to 1960, Belgium enjoyed the right to govern the Congo. In 1960, Belgium transferred that right to the new entity -- the Congo -- and granted it independence. No preparations had been made for this transfer; the new government was divided and bankrupt, and was

hardly able to control the capital city let alone the entire territory. Therefore, Belgian and other foreign troops were dispatched to the Congo to intervene, and financial and military assistance was provided by the U.N. Despite this chaos, and the evident lack of effective government in the new entity, the Congo was widely recognized as a state and was granted membership in the United Nations. How was it that the Congo came to be recognized and accepted as a state? The answer could lie in the fact that recognition was premature and unwarranted, or in the fact that recognition was constitutive. On the other hand, and most likely, the answer lies in the fact that the requirement of government is less stringent than previously presumed. Thus, *prima facie* a new state that is granted full and formal independence has the international right to govern the territory and will be considered to have satisfied the requirement of effective government even if, practically speaking, the government has little control over the territory.⁶⁷

Today, nearly universal international acceptance of a future Palestinian State, as discussed below, combined with the rudimentary control enjoyed by the PA, support recognition of Palestinian statehood despite a lack of effective governance. It is interesting to consider how the circumstances of the Palestinian campaign for statehood have changed over the past fifteen to twenty years. The so-called 'State of Palestine' that was declared in Algiers on November 15, 1988 by PLO Chairman Yasser Arafat as well as in front of the Al-Aksa Mosque in Jerusalem⁶⁸ did not meet the prerequisites for statehood on account of lack of effective control over the claimed territory.⁶⁹ Professor James Crawford discusses this in his article, 'The Creation of the State of Palestine: Too Much Too Soon?' Crawford focuses on the notion of state independence in place of the individual criterion for statehood listed in the Montevideo Convention. Crawford asserts that state independence embodies two elements. The first is the existence of an organized community on a particular territory, exercising self-governing power, either exclusively or substantially. The second is the absence of the exercise of power by another state or even the absence

of a right, vested in another state, to exercise such governing power. Crawford acknowledged in 1990 that the PLO exerts considerable influence in the disputed territories, but he held that this influence fell far short of an "organized self-governing community."⁷⁰

Since 1990, much has changed in the Palestinian Territories. The PLO was replaced by the PA that governed the territories following the Oslo Accords in the 1990s. Despite the PA's rudimentary control, there were several periods, most notably following the outbreak of the Second Intifada in the year 2000, during which time Israel maintained military presence in many areas of the territories for security reasons. The Israeli disengagement from the Gaza Strip in August 2005 marks a new level of authority for the PA in Gaza.

What is worrying is that the rudimentary control that the PA once enjoyed over the Gaza Strip and West Bank seems to have dissipated, as discussed above in the Introduction. Specifically since the Israeli disengagement from Gaza, the rule in Gaza has been anarchy rather than any semblance of order. This chaos has been multiplied by the efforts of Hezbollah and al-Qaida to establish a presence in the Palestinian areas. Therefore, although the Palestinian Territories satisfy the criterion of a 'defined territory,' there are serious doubts as to whether the Palestinians would in fact satisfy the requirement of governance.

4. Criterion iv: Capacity to Enter Into Relations with Other States

The fourth criterion of statehood referred to in the Montevideo Convention is the capacity to enter into relations with other states. The capacity depends, in part, on the power of the internal government in a territory, without which international obligations could not be effectively implemented. It further depends on whether the entity in question enjoys independence, so that no other entity carries out or is responsible for their international obligations.⁷¹

Examples of Viable, Non-Contiguous States

Practically speaking, an entity must actually engage in foreign relations, rather than merely assert a capacity to do so. The mere assertion of such capacity, without more, would be insufficient to meet international legal requirements.⁷²

5. Independence

Outside the ambit of the Montevideo Convention, 'independence' has been identified by some scholars as an implied fifth criterion,⁷³ while others simply view it as equivalent to, and the foundation of, the 'capacity to enter into relations with other states.'⁷⁴ In the *Island of Palmas* case, Judge Huber stated that "[i]ndependence in regard to a portion of the globe is the right to exercise therein, to the exclusion of any other State, the functions of a State."⁷⁵ This notion was elaborated upon in the *Austro-German Customs Union* case.⁷⁶ In his minority opinion Judge Anzilotti gave what is considered to be the *locus classicus* definition of independence. This definition emphasizes two elements: the first is separate territory, and the second is that such territory must not be subject to the authority of another state.⁷⁷

In demonstrating one's independence, the question arises as to what form it should take. There are two recognized forms of independence. The first is formal independence, which exists where governing power over a territory is vested in the separate authorities of the territory.⁷⁸ The second is actual independence, which refers to the effective independence of the putative state -- the real governmental power at the disposal of its authorities.⁷⁹ While seemingly simple, the term operates differently in different contexts. Thus, one must distinguish between independence as an initial qualification for statehood and independence as a criterion for the continued existence

of a state. A new state that is created by secession or a grant of power from a previous sovereign will have to demonstrate substantial independence before it will be regarded as existent -- it must demonstrate both formal and actual independence. An existing state is subject to a far less stringent requirement.⁸⁰

Thus, the Palestinian entity, to be recognized as a state, must be able to demonstrate both formal and actual independence. It is conceivable that the Palestinian entity could demonstrate the existence of both forms of independence.

B. Additional Criteria for Statehood

In his 1977 article entitled *The Criteria for Statehood in International Law*, Professor Crawford sets out certain additional suggested criteria for statehood. Crawford discusses five such standards: permanence, willingness and ability to observe international law, a certain degree of civilization, recognition, and legal order. Not all of the additional standards that Crawford sets forth appear to be additional independent criteria:

a) **Permanence:** The American Law Institute's Draft Restatement provides permanence as a precondition for recognition of statehood.⁸¹ However, states may have a very brief existence during which they satisfy the traditional criteria for statehood, and soon after become failed states. Permanence of such an entity may be a relevant piece of evidence supporting the case for statehood, but not a mandatory criterion for statehood.⁸²

b) **Willingness and Ability to Observe International Law:** It is sometimes suggested that willingness on the part of an entity to observe international law is a criterion

for statehood. More accurately, failure to observe international law may constitute grounds for a refusal to recognize an entity as a state or even for sanctions that are allowed by the law. However, both are distinct from statehood.⁸³

c) A Certain Degree of Civilization: The practice of the United States has, on occasion, supported the view that for an entity to be recognized as a state it must have attained a degree of civilization. Crawford sees this as part of the criterion of governance and not as a separate criterion.⁸⁴

d) Recognition: While recognition is not strictly a criterion for statehood, in cases where an entity does not qualify as a state under the traditional criteria for statehood, recognition can be constitutive. Recognition can therefore be a crucial factor in statehood, and at the least, it can constitute evidence of legal status.⁸⁵

e) Legal Order: It might be thought that the existence of legal order is a criterion for the existence of a state. While legal order is an important element of the criterion of government, and therefore an indication of statehood, whether it is an independent criterion is questionable.⁸⁶

The criteria that Crawford sets out as possible additional standards do not, in the opinion of the authors, constitute additional independent criteria. There are, however, other modern criteria that do supplement the traditional criteria for statehood. These criteria are, as discussed below, a rule of legality, self-determination, recognition (as discussed above), and assertions of statehood.

C. Additional Criteria for Statehood Suggested as a Result of Modern Developments in International Law

In recent years additional criteria for statehood have been mooted. These criteria have been formulated in response to state practice. There have been entities that seem to meet the traditional criteria for statehood and nevertheless have had their claims to statehood rejected. An example of such a state is Rhodesia.⁸⁷

Conversely, there have been entities that seemingly fail to satisfy the traditional criteria for statehood, and yet they have been accepted and recognized as states. An example of such a state is Guinea-Bissau.⁸⁸ This suggests that further considerations have been developed and have gained acceptance in this area of international practice.⁸⁹

Professor Crawford enumerated exclusive and general legal characteristics of states. Crawford identified five characteristics, which constitute the foundation of modern statehood.

First, states have plenary competence, *inter alia*, to perform acts in the international arena. Second, states have exclusive competence with respect to their internal affairs, which means that their jurisdiction is plenary and independent of interference by other states.⁹⁰ The third characteristic that Crawford identifies is that, in principle, states are not subject to compulsory international process, jurisdiction or settlement. To be so subject the state must actually consent either in a specific situation or generally. The fourth characteristic is that states are regarded as equal, regardless of territorial dimension, population, military capability, or economic strength. Fifth and finally, any derogation from these principles must be specifically agreed to. Thus, the state in question must consent to an exercise of international jurisdiction or a derogation from equality. In case of doubt as to whether a state has in fact consented to any such derogation, an international court or tribunal will draw a rebuttable presumption in favor of its freedom of action.⁹¹ For Crawford, these five principles constitute the essence of statehood. Given these common characteristics, one can assess what additional standards for statehood have developed by examining those entities that share these characteristics.

1. The Rule of Legality

This rule states that in satisfying the traditional criteria for statehood, an entity must not have breached any international law or norm. Framed positively, the rule asserts that an entity, in satisfying the traditional standards of statehood, must do so in accordance with international law. If an entity emerges through acts that are considered to be illegal in terms of international law or norm, then no matter how effective the entity may be, its claim to statehood cannot be maintained.⁹²

The Declaration of Principles of International Law Concerning Friendly Relations and Cooperation Among States, in accordance with the Charter of the United Nations, sets forth some basic precepts.⁹³ These principles give content to the rule of legality. A serious infringement of these standards would bring into question the credibility of an entity claiming statehood, even if it satisfies all of the traditional criteria.⁹⁴

2. Self-Determination and Statehood

The term self-determination was defined in the *Western Sahara* case as the free and genuine expression of the will of the people in a particular territory.⁹⁵ According to Professor Crawford, the term has two quite distinct meanings. It can mean the sovereign equality of existing states, and, in particular, their right to choose their own form of government without intervention. It can also mean the right of a specific people to choose its own form of government irrespective of the wishes of the State of which they are a part.⁹⁶

Self-determination has affected the criterion for government in the sense that the standard necessary, as far as the actual exercise of authority is concerned, is substantially lessened. This can be demonstrated by reference to the former Belgian Congo, which became independent in 1960. Despite what could only be described as turmoil within the territory and the virtual breakdown of government, the Congo was recognized as a state in large part due to the effect that self-determination has had on the criterion of government.

Since there was attainment of self-determination in the Congo, the requirements for effective government were significantly lessened. Therefore the entity could be recognized as a state despite internal turmoil.⁹⁷

In addition to modifying this traditional prerequisite of statehood, the principle of self-determination is sometimes also considered to be a criterion of its own.⁹⁸ On this basis, an entity that lacks the support of the populace, but which purports to be a state, will have its claim to statehood rejected.⁹⁹ This can be demonstrated by the case of Rhodesia. Prior to the arrival of the British, the area today known as Zimbabwe was occupied by independent tribes such as the Shona and the Ndebele. In 1890 Cecil Rhodes set up camp in Harare and hoisted the British flag. In 1923 the territory was formally incorporated into the British Empire. In 1953, Southern Rhodesia, Northern Rhodesia (now Zambia) and Nyasaland (now Malawi) joined together to form the Central African Federation under the British Crown. In 1963, the Federation was terminated. Malawi and Zambia gained independence in 1964. Subsequently, Rhodesia demanded her own independence. The United Kingdom made majority rule a prerequisite for independence, such that the 'state' would be acceptable to the people of the country as a whole. This was not achieved.

In 1965, Ian Smith unilaterally declared independence. The state, which left power in the hands of Caucasians, was not recognized by the international community, and in fact sanctions were imposed on it because self-determination was not achieved.¹⁰⁰

It is important to note that a demand for self-determination does not necessarily confer statehood.¹⁰¹ Self-determination can take various forms and, in the words of Judge Dillard, “it may be suggested that self-determination is satisfied by a free choice, not by a particular consequence of that choice or a particular method of exercising it.”¹⁰² The fact that self-determination does not *a fortiori* confer a right to statehood is made clear by Professor Malvina Halberstam who stated, “[T]he establishment of an independent state for each group seeking ‘self-determination’ may not be the best solution. The desirability of an independent state depends on its economic, political, and military viability and on the effect its independence would have on other states in the region.”¹⁰³

3. Statehood as a Claim of Right?

Is it necessary to expressly assert statehood, or alternatively, is statehood a factual circumstance requiring no express assertions or actions?¹⁰⁴ If indeed statehood requires an express assertion, then such a declaration would constitute an additional modern criterion for statehood.

Practically speaking, it would seem logical that before being recognized as a state, an entity must assert statehood. However, the mere fact that an entity claims statehood is not sufficient. All that such a claim will achieve is to invite an assessment by existing states as to whether the entity in question satisfies the criteria for statehood. Thus, in the opinion of the authors, an assertion of statehood as a claim of right does not appear to be a criterion for statehood, despite the fact that it may be required practically.

D. Recognition and Statehood

As discussed by Professor Malcolm N. Shaw, there is a complicated but significant relationship between recognition and statehood. There are two theories of recognition: the constitutive theory and the declaratory theory. The former asserts that recognition is constitutive of a state, such that only through recognition does a state come into existence. Thus, recognition can be crucial in the creation of a state. Conversely, the declaratory

theory asserts that recognition is not relevant to the existence of a state, since a state can be said to exist once the factual criteria for statehood are satisfied.¹⁰⁵

Whichever view of recognition one chooses to adopt, there is a significant inverse relationship between recognition and the existence of an entity as a state for the purposes of international law. The relationship can be explained as follows: the greater the degree of international recognition that an entity enjoys, the less may be demanded in terms of adherence to the criteria of statehood. Conversely, the more sparse its international recognition, the more stringently the entity will have to comply with the criteria for statehood. If an entity is widely recognized as a state, therefore, it will be subject to a lesser burden of proof of the criteria for statehood. On the other hand, if very few states recognize an entity, then it will be subject to a much greater burden of proof with respect to the criteria for statehood.¹⁰⁶

Presumably, a future
Palestinian State would
receive overwhelming
international recognition.
This can be deduced from
several factors.

The first is the fact that the PLO has been recognized by Israel “as the representative of the Palestinian people” since 1993.¹⁰⁷ The second is that the PLO was granted observer status in the United Nations under United Nations General Assembly Resolution 3237 (XXIX) of 1975.¹⁰⁸ The third factor is that, although premature, the Palestinian State declared in 1988 was given widespread international support receiving recognition from 114 states¹⁰⁹ and being recognized by the United Nations General Assembly through the adoption of Resolution 43/177 (the Resolution was adopted by a vote of 104 in favor, the United States and Israel opposing and 36 states abstaining).¹¹⁰ Moreover, today there is widespread international support for the creation of a

Palestinian State. Given the nearly universal recognition that a future Palestinian State would enjoy, and in view of the relationship between recognition and statehood, less will likely be demanded of the Palestinian entity in terms of adherence to the abovementioned criteria for statehood. In light of the complex relationship between recognition and statehood, and the overwhelming recognition a Palestinian entity aspiring to statehood would likely enjoy, it would probably be recognized as a state in spite of its not being territorially contiguous. This, even if territorial contiguity was a requirement for statehood.

The prevailing view today is that recognition is declaratory, and that it is a political rather than a legal act.¹¹¹ However, there are situations where even today recognition can be of considerable evidentiary value towards the recognition of a state.¹¹² Further, the complex relationship between recognition and statehood impacts the degree to which an entity must satisfy the traditional criteria.¹¹³ Therefore, recognition can have a large impact on statehood.

E. The Criterion of 'A Defined Territory' Reconsidered

The modern additions to the criteria for statehood have, in the opinion of the authors, impacted the traditional criteria and the significance of each criterion. Recent developments in the field of international law suggest that the weight of the traditional criterion of 'a defined territory' has diminished.¹¹⁴ Indeed, several publicists have postulated the decline of a territorially-based view of international law. For example, Charles De Visscher¹¹⁵ noted that territory, which has constituted the basis of international relations since the Middle Ages, no longer possesses the same significance. Ludwig Dembinski writes that new technological developments have minimized the importance of the criterion of territory.¹¹⁶ This appears to be confirmed by the revival of natural law thinking, the growing emphasis on human rights in international law, and the protection of individuals and non-state entities. The principles of human rights enshrined in the Charter of the United Nations, for

example, are primarily applicable to non-state entities. This suggests that there has been a shift in modern international law away from territorial dominance.¹¹⁷

Despite this trend, Professor Shaw, probably correctly, asserts that the territorially based view of international law still retains its position as the foundational hypothesis. Even while asserting this, however, Shaw acknowledges that territory might remain dominant, but its pre-eminence has been modified.¹¹⁸ This acknowledgement, in the opinion of the monograph's authors, suggests that the criterion of 'a defined territory' fulfils a lesser role today than it once did. This accords with the fact that there are many new criteria for statehood.

II. Safe Passage

A. Origins of Safe Passage

One will often hear phrases such as 'territorial contiguity,' 'territorial continuity,' and 'territorial connectivity' spoken with reference to a future Palestinian State. Concerns arise regarding this terminology, as the phrases appear to have no clear meaning. Moreover they are used in divergent ways. The concern is not merely academic or pedantic. In fact, determining the meaning of these phrases is vital in assessing what it is that policymakers, such as President George W. Bush and Secretary of State Condoleezza Rice, demand of Israel.

The idea of safe passage specifically refers to a territorial link between Gaza and the West Bank in the context of the Israeli-Palestinian conflict, and the origins of safe passage can be traced back to the peace negotiations that grew out of the Madrid Framework. The Madrid Conference, under the joint Chairmanship of then President George H. W. Bush and then Soviet Premier Mikhail Gorbachev, was attended by all the major states in the region, as well as a joint Jordanian-Palestinian delegation. Although bilateral and multilateral meetings followed the plenary session, no agreements were ever reached. However, secret talks occurring concurrently with the Madrid Conference began what became known as the Oslo Peace Process.

The first major development in the Oslo peace process occurred in September 1993, with a letter sent by the late Yasser Arafat to then Israeli Prime Minister Yitzhak Rabin recognizing the right of Israel to exist in peace and security. In reply, Israel recognized the PLO as the representative of the Palestinians in the peace process.¹¹⁹ On September 13, 1993, a joint Israeli-Palestinian Declaration of Principles (DOP) was signed. This outlined the interim self-government arrangements agreed to by the parties. These included immediate Palestinian self-rule in Gaza and Jericho, early empowerment for the Palestinians in the West Bank, and an agreement on self-government and the election of a Palestinian legislative council.¹²⁰ Shortly after the Declaration of Principles was signed,

negotiations began between the parties concerning the implementation of the first stage of the DOP, which was Palestinian self-rule in Gaza-Jericho. These negotiations resulted in the Gaza-Jericho Agreement (also known as the Cairo Agreement) that was signed on May 4, 1994.¹²¹

The notion of safe passage is first mentioned in the Gaza-Jericho Agreement article on security arrangements, one of four main issues that the agreement addresses. That is, Article XI deals with safe passage between the Gaza Strip and the Jericho area (located in the West Bank) and specifies that "[a]rrangements for safe passage of persons and transportation between the Gaza Strip and the Jericho area are set out in Annex I, Article IX."¹²² Annex I, Article IX, of this agreement states that there shall be safe passage between the Gaza Strip and Jericho area for residents of the Gaza Strip and the Jericho area, and for visitors to these areas. Israel was to ensure such passage during daylight hours for persons and transportation. Safe passage was to be effected at the Erez crossing point and the Vered Yericho crossing point, and the three routes to be employed between these points were delineated on one of the attached maps. Every person that wished to use safe passage had to carry a safe passage card or a safe passage vehicle permit in the case of drivers with vehicles. A permit enabling one to enter Israel could be used as a safe passage card, failing which the safe passage permits were to be issued by Israel. However, the modalities for the issuance were to be discussed and agreed upon in a different forum -- the Joint Civil Affairs Coordination and Cooperation Committee. One's journey on the safe passage could not be interrupted. It was forbidden to depart from the designated route, and a passenger had to complete his/her journey within a designated time. Those using the passage were to be subject to the laws and regulations applicable in Israel and the West Bank.¹²³ Further, Israel could, for security or safety reasons, modify the arrangements for safe passage. However, at least one route of safe passage had to remain open at all times.¹²⁴

Although it is rather detailed, the Annex does not sufficiently provide a specific description of safe passage. First and foremost, there is no definition of safe passage,

and no details as to the form that the safe passage will take -- be it a road, tunnel, elevated highway, rail, or air-link. Would the passage be for the use of Palestinians alone, or could it be used by foreign tourists, businessmen, or Israelis as well? Further, there is no agreement or even mention as to who will guard the passage, or what criteria Israel would use in granting safe passage permits. For example, would the sides have to agree on criteria, or could Israel make decisions unilaterally? It is unclear where Israeli law or Palestinian law would govern along the route of safe passage.

Safe passage is next mentioned in the Interim Agreement on the West Bank and the Gaza Strip (also known as Oslo II), signed on September 28, 1995.

It is important to note that the arrangements made under this agreement incorporate or supersede all provisions in the previous agreements, such as the abovementioned Cairo Agreement.¹²⁵

Article XXIX of Oslo II deals with safe passage, and states that “[a]rrangements for safe passage of persons and transportation between the West Bank and the Gaza Strip are set out in Annex I.” Annex I, Article X, provides that there shall be safe passage connecting the West Bank with the Gaza Strip for the movement of persons, vehicles and goods. Israel will ensure such passage during daylight hours. Such passage was to be implemented via four crossing points: the Erez crossing point (for persons and cars), the Karni crossing point (for goods), the Tarkumya crossing point, and an additional crossing point around Mevo Horon. Unlike the Gaza Strip-Jericho agreement, those using the safe passage route were subject to Israeli law only. They were not permitted to interrupt their journeys or depart from the designated routes. In a wider provision than previously agreed to,

Palestinian police charge Hamas supporters during clashes in Gaza City. (AP Photo)

Israel could, for security or safety reasons, temporarily halt the operation of a safe passage route or modify the passage arrangements while ensuring that one of the routes remained open for safe passage.¹²⁶

As under the Cairo Agreement, safe passage permits or safe passage vehicle permits issued by Israel were required. Israel could deny the use of its territory for safe passage by persons who had violated safe passage provisions. Such persons could use shuttle buses which would be escorted by the Israeli police and would operate twice a week.¹²⁷

While Oslo II is slightly more detailed than the Cairo Agreement, it too fails to define safe passage or to elaborate on the mechanisms for its realization. Unlike the Cairo Agreement, Oslo II stipulates those people whom Israel can deny safe passage permits. However, Israel's right to deny use of the safe passage is limited. Israel did not have unilateral discretion with regard to the granting of safe passage permits. This raised security concerns. Perhaps most importantly, Oslo II differs from the Cairo Agreement in that it provides that people using safe passage be subject to Israeli law only. This is a vital provision as it strongly suggests that Israel retained sovereignty over the strip of land used for safe passage.¹²⁸

The Protocol Concerning Safe Passage between the West Bank and the Gaza Strip was signed on October 5, 1999. The Protocol affirms the commitments made under Oslo II. In fact, the Protocol was entered into with a view to implementing Article X of Annex I to Oslo II. The Protocol, while in certain respects more detailed than previous agreements, also failed to define safe passage, or to discuss the nature of such passage. Significantly, it did imply that Israel would control the crossing points by asserting that nothing in the Protocol would be construed as derogating from Israel's right to apply inspection measures necessary for ensuring safety and security at the crossing points of the safe passage. Thus, Israel would have sovereignty over the land used for safe passage and would also control the crossing points.

The Taba negotiations in January 2001 failed in most respects, but the sides did agree that there would be

a safe passage from the north of Gaza to the Hebron district, and that the West Bank and Gaza were to be territorially linked. This implies that the parties agreed on the creation of some form of safe passage. However, the nature of the regime governing the territorial link and the issue of sovereignty over it was left undecided.¹²⁹ Little came of these negotiations, which closely followed the outbreak of the Second Intifada in September 2000.

Some argue that the parties to the Oslo interim agreements agreed, in principle, to a territorial link of some sort between the Gaza Strip and the West Bank. However, this is based on an erroneous understanding of the provisions.

In fact, the articles were intended to assure the Palestinians that Israel would not reach a separate agreement with either the West Bank or the Gaza Strip, and annex the other respectively.¹³⁰ Thus, interpreting this provision as necessitating a territorial link of some nature is fallacious.

After the failure of the Oslo process President George W. Bush's 2003 proposal of A Performance-Based Roadmap to a Permanent Two-State Solution to the Israeli-Palestinian Conflict, under the auspices of the Quartet, constituted a major development in the resolution of the conflict. The Roadmap specified the steps for the two parties to take to reach a settlement, and it imposed obligations on both parties. The objective of the Roadmap was a "settlement, negotiated between the parties" that would "result in the emergence of an independent, democratic, and viable Palestinian State living side by side in peace and security with Israel and its other neighbors."¹³¹

There were three phases to the Roadmap. In each phase the parties were expected to perform their obligations in parallel, unless otherwise stated. Progress under the Roadmap required and depended upon the good faith efforts of the parties and their compliance with each of their obligations. Phase I of the Roadmap was directed at ending terror and violence, normalizing Palestinian life, and building Palestinian institutions. Phase II was a transition phase, wherein efforts were to be focused on creating an independent Palestinian State with provisional borders and attributes of sovereignty, based on a new constitution, as a step towards a permanent status settlement. As part of this process, there was to be implementation of prior agreements to enhance maximum territorial contiguity. This suggests that provisions of safe passage in prior agreements were to be implemented in Phase II of the Roadmap. Finally, Phase III dealt with a Permanent Status Agreement and the End of the Israeli Palestinian Conflict.

Subsequent to the Roadmap's proposal, then Israeli Prime Minister Ariel Sharon formulated the Disengagement Plan, which he believed created an opportunity for advancing towards peace in accordance with the Roadmap.

Ariel Sharon attached fourteen reservations to his acceptance of the Roadmap. Despite such reservations, both sides accepted the content of the Roadmap in principle and committed themselves to its realization. Although the timetable set by the Roadmap has not been complied with, the document is relevant in light of the fact that both parties and international bodies still refer to it. For example, in December 2005 then Secretary-General of the U.N., Kofi Annan, called for the redoubling of efforts by the respective parties to meet their Roadmap

obligations.¹³² Similar sentiments were expressed by Ariel Sharon in September 2005, when he said that "[t]he State of Israel is committed to the Roadmap."¹³³ Further, none of the parties involved have renounced, either expressly or tacitly, the provisions of the Roadmap or the Roadmap in its entirety.

The General Outline of Sharon's Disengagement Plan was made public in April 2004. The main aspects of this plan were the evacuation of the Gaza Strip, including all existing Israeli towns and villages, and the evacuation of certain areas in the West Bank, including four villages and all military installations.¹³⁴ Post-disengagement, Israel entered into an agreement with the Palestinians concerning the Rafah crossing on the Gaza-Egypt border. In this agreement, Israel not only committed herself to an international crossing point on the Gaza-Egypt border, but to facilitating the movement of goods and people between the Palestinian Territories.

The Agreement Document on Movement and Access from and to Gaza, dated November 15, 2005, speaks not of safe passage, but of convoys. The parties agreed to the establishment of bus convoys for transit of people and truck convoys for transit of goods. There is an important reservation in the Agreement Document on Movement and Access from and to Gaza: it is to be "understood that security is a prime and continuing concern for Israel and that appropriate arrangements to ensure security will be adopted."¹³⁵ This provision is widely phrased, such that it is difficult to determine how the link between Gaza and the West Bank will be implemented, and whether in fact it is still the same as the safe passage agreed to previously.

Despite Israel's commitment to bus convoys operating between Gaza and the West Bank by December 15, 2005, this promise has not been actualized. This is due to a failure on the part of the PA to fulfill their commitments under the Rafah Agreement. The agreement required that the PA prevent the movement of weapons and explosives from Egypt into Gaza. Yet, large amounts of weapons and explosives have in fact flowed in from Sinai.¹³⁶ Moreover, terrorists have been allowed to enter Gaza through the Rafah border with Egypt, as

discussed in the Introduction. In light of the facts on the ground, Ra'anán Gissen, then spokesman for Ariel Sharon, said that, "[t]he whole discussion of operating this new arrangement (convoys) will be delayed until the PA is serious about fighting terror."¹³⁷ The position of the Defense Ministry is that starting the convoys is dependent on the security situation.¹³⁸

The position that has been adopted by the Israelis on this issue of convoys is legitimate.

A convoy from the West Bank to Gaza effectively means entry into Israel. In place of attempting to cross the barrier along the border between Israel and Gaza, terrorists will simply use the convoys to the West Bank, and from there cross into Israel.

Thus, the convoys ease restrictions on both ordinary Palestinians and Palestinian terrorists,¹³⁹ and raise security concerns for Israel. Given these security considerations, which will be discussed in more detail below, it is important to examine the characteristics of the safe passage.

B. Terms Defined

When referring to the idea of safe passage, several terms have been used to describe what is desired. These terms are not only different from each other, but each one has more than one definition, making it difficult to be sure which meaning the speaker intends to use.

1. 'Territorial Contiguity'

As defined in *The Oxford English Dictionary*, contiguity has several meanings, three of which are relevant. Contiguity can mean "the condition of touching or being in contact"

or "a thing in contact." While these are listed as two separate meanings, they are clearly similar and will therefore be analyzed as one. Presumably, should the first (or second) dictionary definition be adopted, then what would be required for the future Palestinian State, given the fact that the Gaza Strip and the West Bank are territorially separate, would be some sort of territorial link connecting the two.

The third relevant definition of contiguity is "close proximity, without actual contact."¹⁴⁰ Were this third dictionary definition adopted, it would be satisfactory for a future Palestinian State if there was merely close proximity between the Gaza Strip and the West Bank. Given the fact that the West Bank and Gaza Strip are already in close proximity a demand for contiguity has already been met. Presumably therefore, the meaning that advocates of safe passage attach to the phrase 'territorial contiguity' is that of touching or being in physical contact, calling for an actual territorial link of some sort.

This assessment is supported by *Black's Law Dictionary*. According to this legal lexicon, contiguity means "the state or condition of being contiguous."¹⁴¹ Contiguous is further defined as "touching at a point or along a boundary, or adjoining." The example given is that "Texas and Oklahoma are contiguous."¹⁴² This clearly supports the conclusion that the legal meaning to be attached to the phrase territorial contiguity is that of touching or being in physical contact.

2. 'Territorial Continuity'

A phrase that is also frequently employed with reference to the Israeli-Palestinian conflict is that of 'territorial continuity.' As defined in *The Oxford English Dictionary* continuity means "the state or quality of being continuous." With reference to material things this dictionary defines continuity as "a continuous or connected whole."¹⁴³ To understand this definition, one must define the word continuous. Continuous as defined in *The Oxford English Dictionary* means "having no interstices or breaks, having its parts in

immediate connection, connected, unbroken, joined continuously to, and forming one mass with.”¹⁴⁴ This definition suggests that what is demanded of Israel by the term ‘territorial continuity’ is some sort of territorial link between the Gaza Strip and West Bank. However, this understanding of the term ‘continuity’ is not supported by the definition offered in *Black’s Law Dictionary*, which in the authors’ opinion is to be preferred. *Black’s Law Dictionary* defines the term, as used in the field of international law, as “the principle that upheavals and revolutions within a country -- as well as changes in governmental forms and the extent of a country’s territory, and measures taken during a military occupation -- do not affect the existence of a country.”¹⁴⁵ This definition of ‘continuity’ as used in the field of international law makes no reference to continuity of a state or continuity as a requirement of statehood. This is interesting as it suggests that the term, in its legal sense, is being used improperly in connection with the Gaza Strip and the West Bank.

3. ‘Territorial Connectivity’

A final demand that policymakers have made of Israel is that the Gaza Strip and West Bank benefit from territorial connectivity. Connectivity, as defined in *The Oxford English Dictionary*, means “the characteristic, or order, or degree, of being connected.”¹⁴⁶ Connected in turn means “conjoined, fastened or linked together.”¹⁴⁷ This also seems to require some sort of physical connection between the West Bank and the Gaza Strip.

Territorial connectivity is not defined by *Black’s Law Dictionary*. Therefore it appears that the term territorial connectivity might be a newly coined phrase, invented to serve the objectives of Secretary of State Condoleezza Rice.¹⁴⁸

Given the ambiguous nature of these three terms, particularly as they apply to the Gaza Strip and the West Bank, it is normal to consider the meanings ascribed by the political players. These players, whose views will be examined below, include then Israeli Prime Minister Ariel Sharon, Condoleezza Rice, the European Union, the Quartet (comprised of the US, U.N. EU and Russia), and the U.N.

C. Variable Recent Usage of Terms by Prominent Political Leaders and Diplomats

Initially the term ‘contiguity’ was used to call for a territorial link of some sort between the Gaza Strip and the West Bank. Arafat muddied the waters in his criticism of then Prime Minister Ehud Barak’s offer at the failed Camp David negotiations in 2000.¹⁴⁹ Arafat claimed that the Camp David offer was “less than a Bantustan.”¹⁵⁰ This claim is not supported by others who were present at the Camp David negotiations. Dennis Ross, Middle East Advisor and Chief Negotiator under Presidents George H.W. Bush and Bill Clinton, stated: “...Arafat never honestly admitted what was offered to the Palestinians -- a deal that would have resulted in a Palestinian State, with territory over 97 percent of the West Bank, Gaza and Jerusalem; with Arab East Jerusalem as the Capital of that state (including the holy place of the Haram al-Sharif, the Noble Sanctuary); with an international presence in place of the Israeli Defense Force in the Jordan Valley; and with the unlimited right of return of Palestinian refugees to their state but not to Israel. Nonetheless, Arafat continue[d] to hide behind the canard that he was offered Bantustans ... Yet with 97 percent of the territory in Palestinian hands, there would have been no cantons. Palestinian areas would not have been isolated or surrounded. There would have been territorial integrity and contiguity in both the West Bank and Gaza...”¹⁵¹

Despite this, Arafat built on his erroneous analogy to South African history and demanded territorial contiguity between the Palestinian areas. Despite the faulty analogy and Arafat’s deceitful misrepresentation of the map he was offered, his demand has reverberated

worldwide with many, believing his exposition of events, taking up his call for contiguity within the West Bank. For example, the Quartet stated that, “a new Palestinian State must be truly viable with contiguity in the West Bank.”¹⁵² Even Ariel Sharon spoke of “[a] democratic Palestinian State with territorial contiguity in Judea and Samaria and economic viability.”¹⁵³

This divergent usage of the terms in issue raises concern that those who use these terms have little if any understanding of their meaning, and certainly no consensus as to their usage. It therefore remains uncertain what would be required of Israel.

More recently, the term has been used in a different context, and while still employed with reference to a link between the Gaza Strip and the West Bank, a new term has been coined to call for a passage between the two -- territorial connectivity. In Kofi Annan’s statement of September 20, 2005, he stated the U.N.’s support for the Quartet’s calls for “connectivity to Gaza” and contiguity within the West Bank.¹⁵⁴ Condoleezza Rice was quoted in July 2005 as saying that the US is “committed to territorial connectivity between Gaza and the West Bank.”¹⁵⁵ But Rice has to date made no express mention of contiguity, connectivity, or continuity within the West Bank. She has stated more cryptically, “Israel must also take no actions that prejudice a final settlement and must help ensure that a new Palestinian State is truly viable. A state of scattered territories will not work.”¹⁵⁶ Therefore, the terms are not used in a uniform manner and can be misleading and difficult to understand. The approach of the European Union shifts between the declarations of the Quartet, which are similar to the American approach,

and the declarations in other forums in which the term territorial contiguity is mentioned in a general sense.

If, however, the phrases used do indeed require some sort of territorial link between the Gaza Strip and the West Bank, questions arise as to the form and characteristics of such a link. It appears as if the term ‘safe passage’ has been used as shorthand for this proposed link. However, little if any consideration has been given to the meaning of the term safe passage, or whether the agreements within which it is mentioned are still binding.

D. Suggestions for the Implementation of Safe Passage

With the characteristics of safe passage as yet unclear, the actual implementation of a safe passage between the West Bank and Gaza could take multiple forms.

One suggested alternative is the building of a secure elevated highway that would connect the two areas. This could be deemed Palestinian territory or an internationally recognized right of way. Indeed, in 1999 then Israeli Prime Minister Ehud Barak proposed the building of a highway that would connect the two areas, and that would consist of four lanes, a railway line, a water pipe and a communication cable. At the time, Barak estimated that this kind of project would cost approximately 200 million dollars.¹⁵⁷ In addition to the expensive and prolonged construction necessary, this highway would leave unresolved security threats; it would not be difficult for vehicles traveling on this highway to drop terrorists or weapons beside the road.

Another alternative, a subterranean highway, might present fewer security risks but the cost of construction would likely be prohibitive. If such a highway is completed, it would be in the form of a tunnel and stand as one of the world’s longest and most expensive tunnels. By comparison, the Chunnel connecting the United Kingdom and France, built in 1994, ran 31 miles long and cost approximately 21 billion dollars.¹⁵⁸ Such suggestions are encouragingly innovative, but practically not realistic.

According to a paper prepared by the World Bank Technical Team in September 2005, convoys operated prior to the second Intifada. Security concerns following the outbreak of the Intifada caused this unfettered movement to be terminated. The probability of a future Palestinian State and the demand for territorial contiguity suggest that such passage will be re-established in the future. The re-establishment of such passage should take the form of a bilateral agreement that addresses Israel's security concerns. The negotiation of such an agreement will likely take time given the array of issues the agreement must necessarily address.¹⁵⁹

Before any safe passage can begin operating, however, an agreement must establish basic conditions for cross-border movement. These include driver license requirements, an approach to the certification of vehicles, a manner in which to determine who will be liable for taxes and duties on the cargo transported, the location of

the crossing points that the driver may use, and the routes available to the vehicle within Israel. The agreement must further list those goods that cannot be moved in transit, including weapons and other dangerous objects.¹⁶⁰

Although there appears to be tension between required security standards on the Israeli side and the free movement of Palestinian goods and passengers, certain key elements to any form of passage will satisfy Israel's security requirements and simultaneously ensure the commercial viability of the passage. For example, with regard to the transfer of goods, there could be a separation of cargo by types, a layered inspection strategy, advance information concerning cargo arriving at the crossing points, and the use of different channels or locations for different types of goods. In addition one could require information concerning the identity of the driver, the physical characteristics of both the vehicle and the cargo being transported, details concerning

An Israeli man examines the missile damage to his home in the southern Israeli city of Sderot. (AP Press Photo)

ownership of the vehicle and the cargo, and a history of activity of the vehicle since its last border crossing.¹⁶¹

At any border crossing the complexity of the inspection process will depend on the nature of the cargo and the transportation system. With respect to the cargo, the more homogenous the cargo, the less complex the inspection; while the more diverse is the cargo, the more complex and detailed the inspection. As for the transportation system, should no part of it cross the border into Israel, then the system will be irrelevant. However, should part of the transportation system cross the border into Israel, then a complex inspection process will need to be employed. The inspection process will be most complex where the cargo, truck, and driver cross the border into Israel.¹⁶²

A refusal to allow a person to make use of the passages should be based on transparent criteria and should be subject to review. Travelers should be inspected by modern equipment and proceedings.¹⁶⁴

Until now, emphasis has been placed on the movement of goods between the Gaza Strip and the West Bank, and the general requirements of any such passage. However, it is not only goods that are to be transferred between the two Palestinian Territories. Indeed, passage must also be provided for Palestinian civilians. Given the current security situation, it is not feasible for free movement for both civilians and goods to be implemented simultaneously. Indeed, as suggested by the World Bank, a phased approach would have to be implemented. The phased approach would involve convoys, of which there are three types, which increase in security related complexity, through Phase One to Phase Three. Phase One involves the movement of passengers on sterile buses. Phase Two involves the movement of

Palestinian cargo trucks. Finally, Phase Three involves the movement of Palestinian passenger vehicles. Each phase would provide experience and would allow time to test the infrastructure, and hopefully build confidence between the parties.¹⁶³

There would be several common factors to all of these forms of convoys. The convoys will all operate on three routes connecting Gaza with the northern, southern and central West Bank. The routes should be away from built up areas and areas with heavy traffic. A sufficient number of convoys should operate daily, during daylight hours, and should operate on fixed, published schedules. The number of vehicles per convoy should be limited in accordance with security considerations. For example, there should be five buses, fifteen trucks, and 25 personal vehicles. The convoys should be organized and escorted by a private Israeli security firm, and have their movement monitored using GPS and radios. All persons making use of the convoys require valid identity and security clearance.

Initially, passage of civilians could be provided for by sterile convoys using dedicated buses that are either specially designated Israeli buses or designated and pre-checked Palestinian buses parked in Israel.

If it is, then the passage should operate at scheduled times and on the basis of advanced notice and security screening. The drivers must provide information on both the vehicle and the proposed passengers. A priority service should be established for officials and businessmen with frequent traveler identity cards.¹⁸³

The use of such buses will, according to the World Bank, minimize the need for security. The World Bank bases this proposition on the fact that the buses will remain in Israeli territory, and that it will not be possible to leave the buses while en route.¹⁶⁵ However what the World Bank has overlooked is the important fact that entry into the West Bank is effectively entry into Israel -- at least until the security fence is complete. Thus, while the idea of sterile bus convoys may be acceptable, it is questionable whether such convoys would only require minimal security checks.

Security checks should be placed in the hands of private contractors, who are acceptable to the Government of Israel (GOI) and the PA. By engaging such private firms for the control of security, performance will be enhanced and the possibility of officials' questionable standards on either side minimized.¹⁶⁶ Further, security checks should not occur for the first time at the border. In fact, all passengers should receive security clearance before traveling. Permission to travel could be denied to those that the PA or the GOI deem to be security risks.¹⁶⁷ Passengers should make advance reservations, and will then be granted permission to travel, and searched at the border. The search, according to the World Bank, should not be too extensive, as the passengers will not alight in Israel. However, as discussed above this is a technical fallacy, and thus the security check may need to be extensive. Indeed, one must consider that it is not only passengers but their luggage as well, which needs to be checked. This may not only be costly, but also time consuming, and there is therefore a suggestion that frequent travelers be issued with frequent traveler cards which could minimize delays.¹⁶⁸

Assuming that such bus convoys would have a turnaround time of forty-five minutes for unloading, driver rest time, and time for reloading, a round trip would take approximately three hours on the southern route, four-and-a-half hours on the central route, and six hours on the northern route. With five buses, having a capacity of sixty people, traveling in each convoy; and with an optimum mix of routes, an estimated 2,100 people could use the convoy on a daily basis in each direction.¹⁶⁹ While

this is perhaps a maximal demand, such convoys would clearly meet current demand.

An alternative to bus convoys is a railway linking the Gaza Strip and the West Bank. This form of safe passage was suggested by the Rand Corporation in a report released in 2005.

The Rand Corporation concluded that the key to Palestinian statehood could lie in the topography of the West Bank. This is dominated by a North-South Mountain Ridge, which divides the West Bank. The Rand Corporation recognizes that economic development and sustainability requires the creation of rapid North-South transportation links within the West Bank, and between the West Bank and the Gaza Strip. The Rand Corporation argues that one can combine this need with the topography of the land, which lends itself to the creation of a major new project running parallel to the ridgeline. The project would consist of the construction of a railroad and toll road along the ridgeline. This, the corporation posits, would encourage further development along the ridge line of lines for electricity, natural gas, communications, and water.¹⁷⁰

The railway would not only offer rapid transportation links between cities in the West Bank, but would link the West Bank and Gaza Strip. To do so, the railway would run for 70 miles along the West Bank ridges; and then slip like a fishhook through the Negev desert and run for approximately 70 miles to connect with cities in the Gaza Strip and a proposed Gaza international airport.¹⁷¹

However, there are other factors that offer support to this form of safe passage. First, the construction of just the railway, toll road, and privately funded housing alongside the railway line would employ 100,000 to 160,000 Palestinians per year over a five year period.

The construction of the main section of the railway will cost approximately 3.3 billion U.S. dollars. This includes the cost of railcars. The total cost will be approximately six billion dollars. These enormous costs weigh heavily against this form of safe passage. This, with the level of unemployment so high in the territories, is a crucial consideration. Second, the railway would be more efficient than bus convoys and would link almost all of the primary cities of Gaza and the West Bank in just over ninety minutes. This is an important consideration given the concerns surrounding the commercial viability and sustainability of the future Palestinian State. Finally, and possibly most importantly, this form of safe passage has received qualified support from both Israelis and Palestinians.¹⁷² This marks a major step forward.

Thus, it would appear that as a first step, a future Palestinian State could have either a bus convoy connecting the West Bank and Gaza Strip, or a railway line connecting the two areas. Assuming that these operate without any problems, one could move to the second phase of the World Bank outline -- truck convoys for goods.

At present, every crossing point between Israel and the Palestinian areas, and even at checkpoints within the West Bank, makes use of back-to-back cargo movement as the mode of cargo transfer. This is generally understood as the transfer of goods from one truck to another, and literally involves the positioning of two trucks back-to-back, and the physical transfer of goods from the one to the other. This process is labor intensive, time consuming, and can cause damage to the cargo as a result of the placement of cargo on the ground during transfer.¹⁷³

Back-to-back cargo movement can be improved, and made more efficient, by the use of a process called cross-docking. This involves a coordinated transfer across a level platform using mechanized equipment. This also eliminates direct handling of the cargo, and therefore minimizes the risk of damage to the cargo.¹⁷⁴

However, the option of even modernized back-to-back cargo movement is not attractive for the large number of trucks that could use the passage on a daily basis. What

is suggested in place of this type of cargo movement is a process of cargo movement called door-to-door.

Door-to-door cargo movement is the movement of cargo from its point of origin to its point of destination. This involves the intact movement of a particular cargo, and is often associated with a single transaction where a single logistics service provider assumes responsibility for the cargo for the entire journey. The cargo movement may involve a sequence of movements on different modes of transport, and may even require the storage of cargo while en route.¹⁷⁵ Such a form of door-to-door movement could be acceptable even in light of Israel's security considerations.

However, the door-to-door movement envisioned by the Palestinians is of a different nature entirely. For the PA, the concept refers to the movement of cargo, intact, and in a single overhaul from its point of origin to its point of destination. Under this definition, door-to-door movement describes not just the movement of the cargo, but also the movement of the vehicle. This is akin to a right of transit, which is beyond what is envisaged by the international concept of door-to-door cargo movement.¹⁷⁶

As concluded by the World Bank, the door-to-door movement envisaged by the Palestinians does not satisfy Israel's security requirements -- at least not in the current security environment.¹⁷⁷ While Israel has accepted that door-to-door movement will over time replace back-to-back movement, and while it has agreed to initiate discussions on this basis, it is clear that at least in the near future Israel cannot accede to the Palestinian demand of door-to-door movement. Israel could at most implement the international understanding of door-to-door movement.¹⁷⁸

Regardless of the form that cargo movement takes, it is suggested by the World Bank that convoys consist of a maximum of fifteen trucks. Initially physical inspections of the trucks will be required as at present satisfactory scanning equipment is not available. Such physical inspections will be both time consuming and costly, and

it is therefore suggested that initially the convoys should be smaller than fifteen trucks, so as to minimize waiting time.¹⁷⁹ Indeed, initially the convoys could be made available to well established trucking companies only, and pre-cleared drivers. From this it could eventually be expanded to all trucking companies and drivers.¹⁸⁰ With such an expansion there should be an advanced reservation system, where to make a reservation one would have to provide information about the driver, vehicle, and cargo aboard.¹⁸¹ This too could minimize delays and waiting time.

Once bus convoys are operational, convoys using Palestinian passenger vehicles can be introduced. These pose the greatest security challenge, as each vehicle will have to undergo a security check. As with bus convoys, the security aspect of passenger vehicle convoys should be managed by a private Israeli security firm, which could either simply check the convoys, or could both check and escort the convoys.

Such a system is reminiscent of a recommendation of the 1937 (British Mandatory Government) Peel Commission, which suggested the partition of mandatory Palestine into two states -- a Palestinian Arab State and a Jewish State. Under this recommendation, the Jewish State would have been non-contiguous. Therefore the Peel Commission recommended some sort of travel corridor that would connect the parts of the Jewish State. The Commission asserted that an open travel corridor "would also solve the problem, sometimes said to be insoluble, created by the contiguity of Jaffa with Tel Aviv to the north and the nascent Jewish town to the south. If necessary, Mandatory police could be stationed on this belt. This arrangement may seem artificial, but it is clearly practicable."¹⁸² This arrangement, even if artificial, was accepted by the Jewish Agency but rejected by the Arabs who did not want a 'Jewish passage' running through their territory. Some such similar arrangement could in the future be required of Israel.

Vehicle clearance will involve two stages. The first will be concerned with the roadworthiness of the vehicle,

and whether the vehicle meets Israeli vehicle and safety requirements. Once a vehicle passes through this stage, there will also be a physical security check. Only upon completion of both stages will a car be allowed to use the passage.¹⁸⁴

The actual form that the passage will take is a technical point. Some argue that it should take the form of a tunnel, others an ordinary highway, others an elevated highway, and yet others a railroad. Whatever form the passage takes will likely depend on Israel's security considerations and the financial costs. The question of under whose sovereignty the mode of passage will fall is an essential consideration.

E. Questions of Safe Passage

1. Sovereignty

In spatial terms international law recognizes four types of territorial regime. These are territorial sovereignty, territory that is not subject to the sovereignty of any state or states and has a status of its own (for example, mandated territories), *res nullius* (territory that is susceptible to acquisition by states but over which no one as yet has sovereignty or control) and *res communis* (communal land belonging to the world population and not capable of being placed under state sovereignty; for example, the seas and outer space).¹⁸⁵ It is with territorial sovereignty that we are concerned.

Territorial sovereignty is not only used as a description of the legal personality of the state. It is also used as a reference to the normal complement of rights that attach to the state -- a state's legal competence. These rights are indefeasible except by special consent of the state concerned.¹⁸⁶ Thus, Professor Brierly defined territorial sovereignty not in terms of the independence of the state, but rather in terms of the existence of plenary rights over a state's territory.¹⁸⁷ Such rights apply primarily with respect to the state's landed territory, but also to the sea adjacent to the land and the seabed and subsoil of the territorial sea.¹⁸⁸

The essence of territorial sovereignty is title. Title relates to both the factual and legal conditions under which territory is deemed to belong in the hands and under the authority of a particular individual.¹⁸⁹ The concept of title is akin to that of ownership. Indeed, the international rules regarding territorial sovereignty are derived from and based upon the Roman-law concept of ownership. In fact, even the modes of acquiring territory and control thereof are directly descended from the Roman rules dealing with acquisition of property. The difficulty that arises from this is that law is closely connected to contemporary life, and to try and overlay an ancient legal system onto a modern world order is challenging.¹⁹⁰

In the context of a future corridor connecting the Gaza Strip and West Bank, questions arise as to who will have sovereignty over the safe passage. Both the Palestinians and the Israelis demand sovereignty over the passage. For the Palestinians, such sovereignty would go a long way to enhancing the status of their future state, and would allay fears that Israel will choke the future Palestinian State by constantly closing the passage due to security concerns. For Israel, security is a primary and legitimate concern. The use of the recently opened Rafah crossing by the Palestinians to smuggle arms and terrorists justifies Israel's security concerns. Israeli sovereignty over the passage would allow Israel to monitor the use of the passage and close the passage should serious security threats arise.

While both parties may demand sovereignty, only one can enjoy sovereignty. It would appear that international law requires the sovereign state to be Israel, on the basis of the concept of international servitudes.

International servitudes are a type of legal right exercisable by states over the territory of other states, which fall short of sovereignty. The concept of servitudes is relevant to the issue of safe passage, as such a passage could eventually be construed as a 'right of way' or servitude enjoyed by the Palestinian State over the State of Israel. The existence of an international servitude does not transfer sovereignty over the territory concerned from the servient state to the dominant state. Sovereignty over the territory, like ownership in Roman law, remains vested in the servient state.¹⁹¹ Thus, were a passage between the Gaza Strip and the West Bank to be created, then under international legal principles, Israel would retain sovereignty over the passage.

For a servitude to come into existence it must either be specifically created by the states concerned or it must have long existed informally as part of the custom of the states concerned.¹⁹² With reference to the question of Palestinian safe passage, no such customary passage can actually be said to exist. In fact, as emphasized by Professor Alan Dershowitz, prior to 1967 the West Bank and Gaza were non-contiguous. The West Bank fell under Jordanian control, and Gaza fell under Egyptian control. There was no territorial link of any sort between the two. Therefore, claims calling for such a link cannot be based on the existence of a customary link between the two areas.¹⁹³ In fact, given this, it appears as if some justification needs to be provided as to why the Palestinians are entitled to more than what is viewed as their maximalist demands -- return to the 1949 armistice lines that existed prior to the Six Day War of 1967. This is effectively what a call for safe passage amounts to, given that no such passage was provided for before 1967. For such a passage to exist, it must be formally created by special agreement between the states.

Although servitudes are in principle intended to last forever, they can be terminated. Servitudes may be terminated by the merger of the servient and the dominant state, by agreement between the states concerned, by express or tacit renunciation on the part of the power in whose interest they were created, by a renunciation by the servient state

Display of weapons captured and offloaded from the PLO's Karine A ship. (Government Press Office)

Missiles discovered and captured on the PLO's Karine A ship. (Government Press Office)

that is accepted by the dominant state, by expiry of a time limit, or by termination of the treaty creating the servitude because of its breach.¹⁹⁴ With reference to passage between the Gaza Strip and the West Bank, Israel would have a right to terminate its use should the Palestinians (the power in whose interest the passage may be created) expressly or tacitly renounce the terms of the passage. Alternatively, should the Palestinians breach the agreement on safe passage, Israel could terminate the use of such passage. Since an essential aspect of the agreement would relate to Israel's security concerns, and would, for example, provide that arms could not be smuggled along the route of passage, then such smuggling would constitute a breach of the agreement or at the least a tacit renunciation thereof. On this basis, Israel could legitimately terminate the use of safe passage.

According to the legal principles associated with servitudes, a servitude does not grant the holder thereof (the dominant state) sovereignty. All that the dominant state enjoys is a limited right to use the territory of another state.¹⁹⁵ This is most relevant to the idea of a passage between Gaza and the West Bank because the Palestinians, being the dominant state, would not enjoy sovereignty over the passage.

Such sovereignty would remain vested in Israel, meaning that Israel would control the actual passage exclusively. From a security perspective this is essential, but not sufficient to protect Israel's security. What is equally if not more important is the question of who will control the crossing points into Israel.

2. Control of Crossing Points

It is essential that Israel control the crossing points used to access the safe passage so as to detect and prevent the smuggling of arms and terrorists. This necessity has been accentuated recently by the chaos that now characterizes the Rafah crossing point. Israel cannot countenance the risk of such disorder at crossing points between Gaza and Israel, or Israel and the West Bank. Given the apparent disinterest of the PA and the ineffectiveness of the unarmed European Border Mission, the only way to avoid such anarchy seems to be through Israeli control of the crossings.

Israeli control will not lead to a cessation of attacks at the crossing points, or even to a decrease in the number of attempted attacks. This is clear from the many terrorist attacks that have occurred at the Erez crossing point between Gaza and Israel. On January 5, 2005, a terrorist infiltrated the Erez crossing terminal, activated an explosive device, hurled grenades, and opened fire on Israeli soldiers.¹⁹⁶ Despite the fact that such attacks often claim Palestinians among other victims and result in closures which cost Palestinian workers their salaries, the perpetrators do not refrain from such attacks. This disregard could intimidate those conducting the inspections, causing them to enable the passage of forbidden cargo or persons. Once in Israel, a wide range of targets could be vulnerable. These factors make Israeli control of the 'safe passage' crossing points a necessity.

III. Israel's Security Considerations

A. Israel's Right to Self-Defense

Numerous writers, international conferences, and international bodies, have purported to formulate lists of so-called basic (or fundamental) rights and duties of states. The basic rights most frequently expressed are those of independence and equality of states, of territorial jurisdiction, and of self-defense and self-preservation. The basic duties that have been emphasized are those of not resorting to war, of carrying out treaty obligations in good faith, and of not intervening in the internal affairs of other states.¹⁹⁷

The basic right that Israel must continually assert is its right to self-defense. This right not only extends to the defense of the state, but also to the protection of its citizens. In the Oslo Agreements with the Palestinians, this right was recognized and enshrined: Israel was given "the responsibility for overall security of Israelis and Settlements, for the purpose of safeguarding their internal security and public order" and granted "all the powers to take the steps necessary to meet this responsibility."¹⁹⁸

Terrorism poses a threat not only to the lives of Israeli citizens, but also to the very existence of the State. Such terrorism is only likely to increase with the creation of safe passage. This threat of terrorism was aggravated by Hamas' victory in the Palestinian legislative elections held on January 25, 2006 and their subsequent authority in the Gaza Strip.

The Hamas Charter contains statements such as "[o]ur struggle against the Jews is very great and serious," and calls for raising "the banner of Allah over every inch of Palestine."¹⁹⁹

Of more concern is the line stating that "[t]he Prophet Allah ... has said: '[t]he Day of Judgment will not come about until Muslims fight the Jews, when the Jew will hide behind stones and trees. The stones and trees will say, O Muslims, O Abdulla, there is a Jew behind me, come and kill him.'"²⁰⁰ Before Hamas' electoral victory, security officials described their possible ascendancy as a "no-win situation"²⁰¹ and asserted that Hamas would never agree to recognize the State of Israel or put terror aside.²⁰² Today, more than fourteen months after the elections, Hamas' stance has not changed. In this current political reality Israel's inherent right of self-defense becomes even more essential.

It is not surprising, facing this reality, that IDF General Amos Gilad implied that in order to exercise its right of self-defense Israel needs more than sovereignty over any future safe passage. She also requires control over the crossing points that provide access to such passage. Only with such control can Israel effectively defend herself and her citizens, by determining who can use the safe passage, what they can carry with them, and ensuring that such standards are reliably implemented. International law appears to support Gilad's assertion. However, some might argue that this control of the crossing points will interfere in the affairs of another state -- the future Palestinian State. While at first glance this might seem to be implied from the duty not to intervene in the affairs of other states, a proper understanding of this duty suggests that in fact this is not its intended meaning.

International law generally forbids intervention by one state in the affairs of another. The intervention that is so prohibited is understood as something less than aggression but more than mere interference, and much stronger than mediation or diplomatic suggestion. To fall within the prohibited realm of intervention, the intervention generally speaking must be against the will of the particular state affected, and almost always, as clarified by the International Court of Justice in the case of *Nicaragua v. United States of America*, serving by design or implication to impair the political independence of that state.²⁰³

Clearly, while the future Palestinian State may oppose Israel's control of the crossing points, such control does not impair by design or implication Palestine's political independence. On this basis, such control, and what could be seen as intervention in the affairs of another state, does not fall within the realm of the prohibition expressed by this international duty. This conclusion is supported by the further holding of the International Court of Justice. The Court went on to say that for an intervention by one state in the affairs of another to fall within the prohibited realm it must both impinge on matters as to which each state is permitted to make decisions by itself freely (for example, choice of its own political system or formulation of its own foreign policy), and if it involves interference in regard to this freedom, it must do so by methods of coercion, especially the use of force (for example, provision of support to underground movements attempting to overturn the elected government). Anything that falls short of this is strictly speaking not intervention.²⁰⁴

It does not appear that Israel's control of the crossing points would be deemed intervention. The control of the crossing points is not a matter for the Palestinian State to decide by itself freely. The matter needs to be decided by both the Palestinians and the Israelis, taking into consideration Israel's legitimate security concerns. Further, such control would not be implemented by force.

Even if Israel's control of the crossing points was construed as a form of prohibited intervention, it would appear that such control would fall into the principal exceptions to the duty. Under these exceptions a state has a legitimate right of intervention. The relevant exceptions are those enshrined "to protect the rights and interests, and the personal safety of its citizens abroad" and "self-defense."²⁰⁵ Not only could Israel intervene on the basis of self-defense, but also, surely the right to protect citizens abroad would extend to the right to protect citizens within the relevant country -- which is the exact purpose that such control would serve. Thus, even if construed as a form of prohibited intervention, Israel could control the crossing points on the basis of these exceptions to the duty.

Although not all three elements will ultimately be satisfied, what is essential for Israeli security is the retention of control over certain militarily vital territory, such as the West Bank mountain ridge.

Therefore, on the basis of Israel's right to self-defense, and the exceptions to the duty not to intervene in the affairs of another state, Israel is arguably entitled to control the crossing points that allow access to the safe passage. This is in addition to her retention of sovereignty over the passage. These are essential features of any safe passage regime.

B. Israel's Need for Defensible Borders

In an address by US President George W. Bush to the American Jewish Committee in May of 2001, Bush stated that "[f]or a Texan, a first visit to Israel is an eye-opener. At the narrowest point it's only eight miles from the Mediterranean to the old armistice line. That's less than from the top to the bottom of Dallas-Ft. Worth Airport. The whole of pre-1967 Israel is only about six times the size of the King Ranch near Corpus Christi."²⁰⁶ Indeed the distances between Israeli population centers and the pre-1967 armistice lines are negligible. Twenty-one miles separate the West Bank and Haifa, nine miles separate the West Bank and Netanya, eleven miles separate the West Bank and Tel Aviv, ten miles separate the West Bank and Beersheba, and seven miles lie between the Gaza Strip and Ashkelon.²⁰⁷

These trifling distances could easily be exploited by a hostile state such as Iran or Syria to launch an attack against the Jewish State. Traditionally, it is this threat of conventional warfare that lies at the heart of Israel's claim for defensible borders. Borders, with which, were Israel to come under attack, the Israeli Defense Forces could fulfill its defensive mission using a conventional

army or some combination of ground forces, and achieve a high probability of success.²⁰⁸ Within the pre-1967 lines, Israel loses the ability to defend herself.²⁰⁹

According to universal military principles of defense, an adequate defensive plan will allow a state sufficient strategic depth to enable defensive forces to be deployed, and to ensure an acceptable distance between the front and the strategic center of the state. Within the pre-1967 lines, at its narrowest, Israel was nine miles wide. Given such an insignificant width, neither of the two principles of defense would be satisfied. Strategic infrastructure in the center of the country would be exposed, and there would be insufficient depth within which the Israeli Defense Forces could regroup and respond.²¹⁰

The US Joint Chiefs of Staff recognized this after the Six Day War in 1967 when they concluded that, “[f]rom a strictly military point of view, Israel would require the retention of some captured Arab territory in order to provide militarily defensible borders.”²¹¹ Moreover, the claim to defensible borders was recognized as a right by the phrasing of UN Security Council Resolution 242, the definitive statement of the senior body at the United Nations on settling the conflict.²¹² The Resolution calls for the “[w]ithdrawal of Israeli armed forces from *territories occupied* in the recent conflict (the 1967 War) (emphasis added). It is vital to note that the resolution does not call for withdrawal from ‘the territories occupied’ but only from “territories occupied.” The English version of the Resolution, which is the prevailing version,²¹³ intentionally leaves out the definite article “the” so as to leave vague the amount of territory from which Israel is expected to withdraw. This tacitly confers a right to defensible borders on Israel.²¹⁴

Ideally, for Israel to have defensible borders, three elements should be satisfied. The first requires Israeli control over the external border between the West Bank and Jordan, and the Gaza Strip and Egypt respectively. The second is the broadening of the corridor connecting Tel Aviv and Jerusalem, as well as establishing a perimeter to protect Jerusalem. Third, and finally, is shifting Israel’s boundary with the Palestinian entity eastward so that

militarily vital territory does not end up under Palestinian control.²¹⁵ Aspects of these elements may be viewed by some as utopian, such as control over external borders. Indeed, Israel has recently relinquished control over the border between the Gaza Strip and Egypt.

Since its capture by the IDF in 1967, the West Bank has contributed greatly to Israel’s security. Immediately adjacent to the Israeli coastal plain, the West Bank north-south mountain ridge commands a view of vital Israeli infrastructure, such as the Ben Gurion international airport and major highways connecting Jerusalem, Tel Aviv, and Haifa. Thus, any hostile military force in charge of the ridge could threaten daily life and even mobilization of Israelis in the center of Israel.²¹⁶ Israeli control of the mountain ridge affords her some level of security.

Moreover, the West Bank mountain ridge serves as a barrier protecting Israel’s coastal plain from attacks from the east. It comprises a 4,200 foot ridge that is relatively steep, and would be an obstacle to a ground attack. At the very least, the amount of time it would take a hostile force to reach the top of the ridge would be sufficient for Israel to mobilize her reserve troops. Thus, even if not preventing an attack by a conventional army, the ridge would afford Israel the time necessary to prepare for an effective defense.²¹⁷

Moreover, although there may have been some development, recent calls from the President of Iran for Israel to be wiped off the map²²³ reiterate the need for caution in the proceedings of Israel’s territorial concessions.

Further, Israel’s control of the West Bank mountain ridge enables her to prevent the smuggling of advanced

weapons to Palestinian terrorist groups. In addition, air defense systems positioned along the ridge can intercept enemy aircraft from forward positions, before they reach Israeli population centers.²¹⁸ Therefore it is apparent that at the very least what is required for Israeli security is control of the West Bank mountain ridge. Without such control, Israel makes herself vulnerable to attack by hostile forces. Indeed, U.S. Lt. (Ret.) General Kelly admitted that, “[i]t is impossible to defend Jerusalem unless you hold the high ground....An aircraft that takes off from an airport in Amman is going to be over Jerusalem in two-and-a-half minutes, so it is utterly impossible...to defend the whole country unless I hold that land.”²¹⁹

C. Have Technological and Political Developments Made Defensible Borders Obsolete?

The need for defensible borders has in recent years been disputed. In the era of long-range missiles capable of crossing vast amounts of territory in minutes, one would think that the concept of defensible borders was no longer of such importance. In fact, the contrary is true. History has shown that while aerial attacks may cause damage, countries are only conquered by troops occupying land. For example, in Iraq’s 1991 invasion of Kuwait, despite six weeks of Allied bombing, Kuwait was only liberated when the Allied troops marched into the country.²²⁰ Thus, while some argue that modern technology makes defensible borders no longer as significant as they used to be, the opposite is, in fact, true. That is, the existence of modern technology only accentuates the need for defensible borders.

As demonstrated by Hezbollah attacks on Israel during the Second Lebanon War of 2006, the advent of missiles has actually increased the value of territory and space. In the age of missiles, the positioning and dispersal of infrastructure, weapons systems and command and control mechanisms become critical. Missile defense can limit the impact of an attack, but cannot prevent it completely, and in the face of a nuclear attack it is the possibility of response that acts as a deterrent to

potential aggressors. This, in turn, is determined by the territory and depth available to a country. The more territory that a state has between itself and its attacker, the better possibility of an effective response and the more of a deterrent it is. This case particularly applies in Israel, where the majority of Israeli forces are reserve troops who mobilize only within 48 hours of an attack. Defensible borders will enable a numerically weaker Israeli Defense Forces to withstand an initial assault, until such time as the army is fully mobilized.²²¹

Positive political developments in the Middle East also make some doubt the need for defensible borders for Israel. Among these are the conclusion of peace treaties between Israel and Jordan, and Israel and Egypt respectively, the efforts to democratize Iraq, and the departure of the Syrian army from Lebanon. However, as politics in the region are very fluid, no guarantees can be made that the improved political situation will be permanent.²²² Defensible borders remain essential.

The continued necessity for Israel to maintain defensible borders is especially so with the imminent possibility of Iran’s possessing nuclear warheads. Further, while Israel may be at peace with Egypt and Jordan, she is not at peace with other Arab countries within the region. Threats still exist from countries such as Syria, Iran, and Saudi Arabia, which could purchase advanced military technology with billions of dollars in oil revenues and subsequently fire missiles into Israeli territory. Despite political developments in the Middle East, this indicates Israel’s continuing need for defensible borders.

US President George W. Bush recognized this need and, in his April 14, 2004 letter to Prime Minister Ariel Sharon, committed US support. Bush wrote that “[t]he United States reiterates its steadfast commitment to Israel’s security, including secure and defensible borders, and to preserve and strengthen Israel’s capability to deter and defend itself, by itself, against any threat or possible combination of threats.”²²⁴ Bush reiterated this commitment in a statement on April 11, 2005, made to Prime Minister Ariel Sharon, in Crawford, Texas. Bush

stated that “[t]he United States is committed to Israel’s security and well being as a Jewish state, including secure and defensible borders.”²²⁵

D. Does Progress in the Peace Process Diminish the Threat of Terrorism?

Disproportionate emphasis has been placed on defensible borders in the context of an external threat from, for example, Iran, to the exclusion of a more imminent threat: terrorism. Too little, if any, consideration has been given to Katyusha rockets or Qassam rockets or other such weapons being fired from within the Gaza Strip and West Bank. Terrorists carrying these readily available and easily transportable weapons could also infiltrate from the West Bank into Israel. The concept of defensible borders is, perhaps, even more essential in this context. Indeed, to see the real importance of the Gaza Strip and the West Bank for Israeli security, one need only look at the many attacks that were carried out by the Palestinians living in these areas prior to 1967.

Any territorial link between the West Bank and Gaza Strip only augments this threat by facilitating terrorist infiltration into Israel.

One can in fact distinguish, as Dan Haloutz, former IDF Chief of Staff, between full-scale war and low-scale conflict. Low-scale conflict does not mean that there are no casualties. However, as compared to full-scale war, which is usually shorter, sharper and generally ends with a much clearer result, low-scale conflict is continuous and somewhat muddled.²²⁶ It is this continuous, low-scale conflict, which takes the form of thousands of acts of terrorism, with which the authors of this monograph are presently concerned.

In considering safe passage in the context of terrorist infiltration into Israel, concerns are raised by the possibility of a terrorist using the safe passage, leaving the established route (a highway, for example), and entering Israel in order to carry out an attack. Few realize

Masked Palestinian terrorists use real rockets and launchers to perform a training exercise for the media in the Gaza Strip. (AP Photo)

that there is a more subtle and more complex threat. In an attempt to prevent terrorist infiltration into Israel, Israel has erected a security fence along the entire Gaza Strip and part of the West Bank. It would be incorrect, however, to see this fence as a defensible border. While around the Gaza Strip the fence has succeeded in blocking infiltration attempts into Israel, this success is due in large part not to the fence but to the IDF that monitors the fence and has intercepted most terrorists before they crossed through the fence.²²⁷ Further, and possibly most importantly, the fence along the West Bank is only in the process of being constructed, and is incomplete in many places.²²⁸ Thus, safe passage from the Gaza Strip into the West Bank effectively constitutes safe passage directly into Israel. A terrorist can therefore use the safe passage, enter the West Bank, and from there easily infiltrate Israel.²²⁹

The completion of the security fence around the West Bank may minimize this particular threat, and make it more difficult for terrorists to infiltrate Israel from the West Bank.

However the security fence will not be a panacea to the terrorist threat from the West Bank and Gaza Strip that is augmented by the creation of a safe passage.

In addition, smuggling of arms from Egypt into the Gaza Strip is a notorious and ongoing practice. Israeli intelligence believes that at least 10 Strella SA-7 shoulder-launched anti-aircraft missiles have been smuggled into Gaza in recent years.²³⁰ Indeed, the IDF website states that during the year 2003 a total of 44 tunnels between Egypt and Gaza, presumably used for the passage of these weapons, were discovered, while in 2004 the number had decreased somewhat to 36.²³¹ It is left for us to wonder how many of these tunnels were not discovered and operate daily until today. And lest it be assumed that the tunnels are the only method devised

to bring weapons into Gaza, it should be recalled that the PA under the late Yasser Arafat was itself responsible for the infamous *Karine A*, a cargo ship loaded with Iranian missiles that Israel intercepted en route to Gaza.²³² The list of armaments on the ship is disquieting.

As a result of the discovery of the *Karine A*, the PA, Hamas, Islamic Jihad and other organizations may not at present possess all of the arms which were on board the ship, but this does not mean that their efforts to acquire such weaponry have abated. Indeed, the practice of arms smuggling has only increased with Palestinian control of the Rafiah border crossing, as discussed in the Introduction. Yuval Diskin, head of Israel's domestic security service, the Shin Bet, said that large quantities of weapons have been smuggled since Israel's withdrawal from Gaza. These included an undetermined number of Soviet-era Grad artillery rockets with a range of 16.6 miles, a small quantity of Strella surface-to-air missiles, 305 anti-tank missiles and significant quantities of military-grade explosives.²³³ Safe passage between the Gaza Strip and the West Bank could open the door to the free flow of rockets, arms, and artillery from the Gaza Strip to the West Bank -- an as yet unprecedented situation. A heavily armed West Bank poses not only a terrorist threat, but in fact an existential threat to Israel, with or without the security barrier.

There are numerous instances of terrorism committed by the firing of, for example, rockets and mortar shelling, as discussed above in the Introduction. These incidents have had little impact on Israel, given the fact that most rockets to date have been launched from the Gaza Strip and could until recently only reach the Israeli Negev city of Sderot with a population of approximately 35,000. With the Israeli withdrawal from Gaza, rocket attacks have increased in frequency. Especially with the weapons being smuggled from Egypt, the Israelis are concerned by the prospect of rockets with greater range and more powerful warheads being fired from Gaza into the major Israeli port of Ashdod and the industrial zone of Ashkelon.²³⁴ The danger of rockets striking Ashkelon is magnified by the location of the Rutenberg power station, as well as the large fuel and chemical depots, a desalination plant,

and the oil pipeline running to the Red Sea port of Eilat.²³⁵ On February 14, 2006, eight Qassam rockets were fired at the Western Negev, with one exploding close to a strategic installation in the Ashkelon industrial zone. The threat this capability poses could wreak havoc: National Infrastructure Ministry officials told the *Jerusalem Post* that if fired accurately, Qassam rockets had the ability to shut down the Ashkelon power plant, which provides electricity to half the country, causing "severe damage to infrastructure and human lives."²³⁶ Moreover, being closer to the Israeli border has enabled terrorists from Gaza to reach, as mentioned above, the major coastal city of Ashkelon. This is especially so with reports by Shin Bet Director Diskin that Fatah smuggled seven to ten missiles with a range of nine to eighteen miles into the Gaza Strip prior to disengagement. These missiles can reach approximately three times farther than the Qassam rockets that terrorists are currently using, and could put the major Israeli port city of Ashdod within firing range.²³⁷ Additionally, Brigadier General Yossi Kooperwasser, Head of IDF Military Intelligence Research, warned that, "It is very possible that in the coming months the Palestinian organizations will succeed in extending the Qassam range."²³⁸ However, these facts pale in significance when compared with the imminent possibility of safe passage and the smuggling of rockets and such weapons into the West Bank via the safe passage.

Some might argue that the possibility of peace eliminates threats of terrorism to the Israeli population centers and strategic Israeli interests. However, this does not appear to be the case based on the historic responses of the Palestinian people to peace initiatives.

Indeed, on December 26, 2005, three Palestinian groups, one of which belongs to the mainstream Fatah faction of PA President Abu Mazen,²³⁹ threatened to continue their attacks on Israel. They claimed to have long-range missiles, capable of reaching more Israeli towns and cities than in the past, and one of the groups said that it has developed a rocket with a range of 9.3 miles. Further, the groups claim that they possess Russian-manufactured Grad missiles smuggled into the Gaza Strip from Egypt. These missiles have a range of approximately 15 miles. The missiles, also known as BM-21, are 4.80 in (122-mm caliber) in diameter.²⁴⁰ These missiles were clearly intended for military use, and not for attacks on vulnerable civilian population centers.

When asked whether Grad missiles had indeed been smuggled into the Gaza Strip from Egypt, an unnamed Palestinian official said he did not rule out the possibility that such weapons had been smuggled from Egypt.²⁴¹ This failure on the part of the PA to meet the commitments they made in the negotiations on the Rafah crossing bodes poorly for the future Palestinian State's commitments to peace. Further, the importation of such weapons into Gaza from Egypt increases the probability that they will be smuggled via the proposed safe passage from the Gaza Strip to the West Bank. The improved weaponry would enable Palestinians in the West Bank to reach additional Israeli population centers.

Thus, not only will the threat of smuggling be increased by the creation of safe passage, but the threat posed by the firing of rockets from the West Bank will be augmented. It does not appear that these threats will subside in the near future. In fact, the threats posed are enhanced by improved technology and increased rocket range. This confirms the need for defensible borders, and raises serious security concerns over any future safe passage that is agreed to by the parties.

To appreciate the threat that will be posed, it is important to have a basic knowledge of the kind of weaponry that the Palestinians currently possess as well as those weapons that Palestinians could possess in the future.

Weapons available include:

Weapon	Source	Range	Width	Weight	Weight of Explosives	Warhead Types
Qassam 3	Palestinian Territories	6.2 miles	6.69 in	198.42 lbs	22-44 lbs	various
Katyusha Rockets	Russia	3 miles	5.20 in	92.59 lbs	48.50 lbs	various
Sakr Eye: Low-Altitude Surface-to-Air Missile	Russia	2.73 miles	28.35 in	33.07 lbs		2.2 lbs plus HE smooth fragmentation with contact and glaze fuzing
Strela 2: Low-Altitude Surface-to-Air Missile	Russia	0.5-2.1 miles	2.83 in	20.17 lbs		2.57 lbs HE smooth fragmentation with contact and glaze fuzing
Mortars			3.19 in	93-97 lbs	15 lbs	
Anti-Tank Rockets		0.16 miles	2.36 in	11 lbs	15.43 lbs	
RPGs	Soviet Union	0.19 miles	3.35 in	17.42 lbs	4.63 lbs	
Grad Missiles (BM 21)	Russia	18.6 miles	4.80 in	40.57 lbs		Smoke, incendiary, chemical, illumination, anti-tank mines, and anti-personal mines

A West Bank armed with such weaponry means that most of the major Israeli population centers are potential targets. Qassams could be used to attack Kfar Sabba and Jerusalem. Katyushas could be used to attack Afula, Netanya, Tel Aviv, Kiryat Gat and Beersheva.²⁴⁵ Further, serious threats would be posed to Israel's strategic interests. The Ben Gurion International Airport, through which nearly all international travelers pass, could, for example, be struck by a Qassam, and areas around the route 443 highway linking Jerusalem with Tel Aviv.²⁴⁶ Indeed, Israel revealed on Monday, January 2, 2006 in an indictment filed in a Beersheba district court, that

a terrorist attempt by Fatah's Al Aksa Martyr's Brigade against the Dimona nuclear reactor was foiled.²⁴⁷

These security concerns, which include rocket attacks and weapons smuggling, seem to militate against the creation of any safe passage between Gaza and the West Bank. However, would such a non-contiguous Palestinian State be viable, as is so often demanded by international leaders? To answer this question, one needs to consider the meaning of viability, and examples of past and present non-contiguous states.

IV. Viability of a Palestinian State

A. “Viable Statehood” in Context

When referring to the future State of Palestine, many politicians and international organizations demand that the state be ‘viable.’ For example, President Bush called for “[a] viable Palestinian State” in a speech he delivered in February 2005.²⁴⁸ Similarly, Condoleezza Rice asserted that, “Israel must also take no actions that prejudice a final settlement and must help ensure that a new Palestinian State is truly viable.”²⁴⁹

These official American sentiments were echoed at the UN, with Kofi Annan calling for “international support for an independent, democratic, viable and contiguous Palestinian State.”²⁵⁰ Similarly, the Quartet agreed on “the need to ensure that a new Palestinian State is truly viable.”²⁵¹

These calls for a viable Palestinian State are often linked to the assumption that it must be contiguous to be truly viable. The premise here is that a non-contiguous state cannot be viable because to be viable one must necessarily have movement of people and goods between parts of the state’s territory. The basis of this argument is questionable. First, there have been goods’ convoys transporting goods from Gaza to the West Bank.²⁵² This, interestingly, functions in the absence of safe passage.

Second, a Palestinian State could be viable without safe passage if the Palestinian people exercise their right to

free transit. This right is accorded to the Palestinians by virtue of their being a member of the Arab League of States, and a signatory of the Arab Transit Agreement of 1977. In terms of this agreement, ‘Palestine’ has the right of free transit over the territories of other Arab signatory states. The exercise of this right could have an enormous impact on the future Palestinian State and its economy. Both Egypt and Jordan are signatories. Thus, they are obliged to exempt Palestinian goods in transit from custom duties, taxes and other such charges.²⁵³ This, again, in the absence and without the necessity of the safe passage.

Despite these facts, calls still abound for safe passage, which consider safe passage essential for a viable Palestinian State. To ascertain whether this understanding of viability is correct, one must consider the meaning of viability.

B. Terms Defined: ‘Viability’ and ‘Viable’

As defined in *The Oxford English Dictionary* viability has two meanings. Depending on which meaning is adopted, the meaning of viability in the context of the Israeli-Palestinian conflict, and the demands for the creation of a Palestinian State will differ. The word viable also has two meanings that correspond to the two distinct meanings of viability.

The first possible meaning of viability is the “quality or state of being viable, capacity for living, the ability to live under certain conditions. Also... now esp. feasibility, and the ability to continue or be continued.”²⁵⁴ According to *The Oxford English Dictionary* viable can mean “capable of living, able to maintain a separate existence.”²⁵⁵ If this is what is meant by the term viable, then it would seem that the Palestinian State could indeed be non-contiguous and yet remain a viable state. The fact that the state is non-contiguous does not render it unfeasible.

However, the words viability and viable can carry different meanings. According to *The Oxford English Dictionary*, viability can also mean “the condition of being traversable.”²⁵⁶ Viable too can mean “traversable.”²⁵⁷ Whether traversable means legally or physically

Examples: Viable States Under International Law:

No Prescribed Minimum Size of Territory
(The West Bank and Gaza total area is 2,316 sq.mi.)

traversable is a question in and of itself. Presumably, in the context of a Palestinian State, the term would be used to mean physically traversable, especially in light of the demands for territorial contiguity, territorial connectivity and territorial continuity. Given this meaning of the words, it appears as if the calls for a 'viable Palestinian State' might amount to nothing more than calls for a territorial link between the West Bank and Gaza Strip.

However, the understanding of these terms as considered in the previous paragraph is not supported by *Black's Law Dictionary*. In the authors' opinion this legal lexicon is to be preferred over the general purpose *Oxford English Dictionary*. *Black's Law Dictionary* defines the word viable as meaning "capable of independent existence or standing," or as "capable of living, especially outside the womb."²⁵⁸ These definitions suggest that all that is required for a state to be viable is that it is capable of independent existence or survival.

With this understanding of the legal meaning of viable statehood, it is necessary to know what is required for statehood.

C. Legal Criteria for Statehood

Given that states are the principle subjects of international law, there must be a legal criteria for statehood. The most definitive formulation of the basic criteria for statehood was established in Article I of the Montevideo Convention on Rights and Duties of States, 1933. It reads as follows, "[t]he State as a person of international law should possess the following qualifications: (i) a permanent population; (ii) a defined territory; (iii) a government; and (iv) a capacity to enter into relations with other states."²⁵⁹ (emphasis added)

There is a fifth criterion that is not specifically mentioned in the Montevideo Convention, but which many academics believe to be implied in the fourth criterion. The argument

is that independence is implied from the fourth criterion since without independence, an entity cannot operate fully in the international sphere.²⁶⁰

In the context of safe passage, the second criteria, a defined territory, holds the most significance.

1. A Defined Territory

States are quite clearly territorial entities, and as such, need a territorial base from which to function. While there is a need for a defined territory, there is no prescribed minimum size of the territory. Indeed, one finds both very large and very small states. Russia is 6,592,771 square miles; 1.8 times the size of the United States. Tuvalu, an island group in the South Pacific Ocean, is only 10 square miles -- 0.1 times the size of Washington, DC. Nauru, an island in the South Pacific Ocean is only 8.2 square miles.²⁶¹ Further, it is not a requirement that the boundaries of the territory be fixed or certain.

What is vital to note is that the criterion of a defined territory does not require that the state possess geographical unity. Indeed, a state may consist of disconnected territorial areas. Many states are comprised of a mainland and islands, such as Australia, which consists the mainland and islands including Tasmania, Norfolk and very distant islands like Christmas and Keeling. A state can also comprise many islands. The Marshall Islands are two archipelagic island chains of 30 atolls and 1,152 islands. Indonesia is the world's largest archipelago with 17,508 islands. These states are not geographically united.

In addition, and of particular relevance to this monograph, a state may comprise separated territories between which lies territory of a foreign sovereign entity. For example, the United States and Alaska are separated by approximately 500 miles of Canadian territory.²⁶² Based on past and present international practice, a state does not possess an inherent right to a link between its geographically distinct areas. In particular this may be applied to the sovereign link called for by the Palestinians between Gaza and the West Bank. The lack of a link between separated territories does not affect whether a

new political community should be recognized as a state under international law.

From 1948 to 1967, the Gaza Strip was controlled by Egyptian military rule and the West Bank was occupied by Jordan. During this time, there was no connection between these two territories. After Israel captured these territories in the Six-Day War, UN Security Council Resolution 242, which was adopted in November 1967 to recommend a resolution of the final status of the territories, made no mention of a territorial link between Gaza and the West Bank.

What is important in the case of a defined territory is not unbroken territory. What is essential is the control of territory -- that the state constitutes a certain coherent territory over which it governs effectively.²⁶³ It appears as if contiguity is not an indispensable prerequisite for statehood, or a state's inherent right.

2. Other Criteria

a. A Permanent Population

This connotes a stable community of people who identify themselves with a specific territory. The size of the population is of no consequence.²⁶⁴ Who actually belongs to the population of a state is determined by the municipal law on nationality.²⁶⁵

b. Government

Effective government is crucial to an entity's statehood. Although this criterion is somewhat ambiguous, it appears that what is required is a complete system of institutions regulating all aspects of life within the territory under government control. Effective governance may be determined by the degree of calm or chaos within the territory. If, for example, a civil war breaks out, the effectiveness of the institutions is doubtful.²⁶⁶

Today, nearly universal international acceptance of a future Palestinian State combined with the rudimentary control enjoyed by the PA, support recognition of Palestinian statehood despite a lack of effective governance.

Professor James Crawford, in his 1990 article, 'The Creation of the State of Palestine: Too Much Too Soon?' acknowledged that the PLO exerts considerable influence in the disputed territories, but he held that this influence fell far short of an "organized self-governing community."²⁶⁷ Since 1990, much has changed in the Palestinian Territories. The PLO was replaced by Fatah, its political counterpart, which held power as the PA that governed the territories following the Oslo Accords in 1993. Despite the PA's rudimentary control, there were several periods, most notably following the outbreak of the 2000 Intifada, during which time Israel maintained military presence in many areas of the territories for security reasons. The Israeli disengagement from the Gaza Strip in August 2005 marks a new level of authority for the PA in Gaza.

The requirement of effective government actually has two aspects: the actual exercise of authority, and the right or title to exercise authority.

What is concerning is that the rudimentary control that the PA once enjoyed over the Gaza Strip and West Bank seems to have dissipated. Specifically since the Israeli disengagement from Gaza, the rule in Gaza has been anarchy rather than any semblance of order. Therefore, although the Palestinian Territories satisfy the criterion of a 'defined territory,' there are serious doubts as to whether the Palestinians would in fact satisfy the requirement of governance.

c. A Capacity to Enter into Relations with Other States

This criterion, the capacity to enter into relations with other states, depends in part on the power of the internal government in a territory, without which international obligations could not be effectively implemented. It further depends on whether the entity in question enjoys independence, so that no other entity carries out

or is responsible for their international obligations.²⁶⁸ Practically speaking, an entity must actually engage in foreign relations, rather than merely assert a capacity to do so. The mere assertion of such capacity, without more, would be insufficient to meet international legal requirements.²⁶⁹

d. Independence

Independence has been identified by some scholars as an implied fifth criterion,²⁷⁰ while others simply view it as equivalent to, and the foundation of, the 'capacity to enter into relations with other states.'²⁷¹ In demonstrating one's independence, the question arises as to what form it should take. There are two recognized forms of independence. The first is formal independence, which exists where governing power over a territory is vested in the separate authorities of the territory.²⁷² The second is actual independence, which refers to the effective independence of the putative state -- the real governmental power at the disposal of its authorities.²⁷³

While seemingly simple, the term operates differently in different contexts. Thus, one must distinguish between independence as an initial qualification for statehood and independence as a criterion for the continued existence of a state. A new state that is created by secession or a grant of power from a previous sovereign will have to demonstrate substantial independence before it will be regarded as existent -- it must demonstrate both formal and actual independence. An existing state is subject to a far less stringent requirement.²⁷⁴ Thus, the Palestinian entity, to be recognized as a state, must be able to demonstrate both formal and actual independence. It is conceivable that the Palestinian entity could demonstrate the existence of both forms of independence.

e. Modern Developments in International Law

In recent years additional criteria for statehood have been formulated in response to modern developments in state practice. This suggests that further considerations have been developed and have gained acceptance in this area of international practice.²⁷⁵

International Law
Concerning Friendly
Relations and Cooperation
Among States, in accordance
with the Charter of the
United Nations, sets forth
some basic precepts, one of
which says that states shall
refrain from the threat or use
of force against the territorial
integrity or political
independence of a state.²⁷⁷

The rule of legality states that in satisfying the traditional criteria for statehood, an entity must satisfy the traditional standards of statehood in accordance with international law. If an entity emerges through acts that are considered to be illegal in terms of international law or norm, then no matter how effective the entity may be, its claim to statehood cannot be maintained.²⁷⁶

D. Examples of Viable, Non-Contiguous States

Examples of both past and present non-contiguous states suggest that contiguity is not a prerequisite for a state's viability, and that a state will be capable of existing even if it is non-contiguous. It is to these examples that we now turn.

There are many examples, past and present, of non-contiguous states -- states consisting of two or more parts between which lies foreign sovereign territory -- which have nevertheless proven themselves to be viable. There are, however, some examples of non-contiguous states that do raise concerns. For example, East Pakistan (referred to as East Bengal prior to 1955) and West Pakistan, and the Danzig Corridor proved to be problematic.

Pakistan was created when the United Kingdom left India, and the subcontinent was divided according to

religious affiliation. Pakistan's *raison d'être* was to form a separate Muslim nation, and Pakistan was composed of territories in East and West India with a Muslim majority. Pakistan gained independence on August 14, 1947, and from 1947 to 1971 the state consisted of two units: West Pakistan and East Pakistan, separated from one another by over 1,000 miles of Indian territory. The Western Zone was called West Pakistan and the Eastern Zone was called East Bengal.²⁷⁸

In the general elections held in December, 1970, an East Pakistani party, the Awami League, came to power. However, the West Pakistan-dominated leadership would not allow the elected party to enter office. Prior to the 1970 election, the government of Pakistan had always been dominated by West Pakistan, and the West Pakistanis were not prepared to relinquish their control. Therefore, the Awami League advocated autonomy for East Pakistan. This demand was the immediate cause of the Bangladesh Liberation War that erupted in 1971, and led to the murder of approximately three million East Pakistanis by West Pakistani troops trying to quash the rebellion. Eventually in 1971, after the intervention of India, West Pakistan surrendered and Bangladesh (formerly East Pakistan) declared her independence.²⁷⁹

Supporters of a safe passage between Gaza and the West Bank might claim that the Bangladesh Liberation War and the secession of East Pakistan was the result of non-contiguity between East Pakistan and West Pakistan. Historical fact indicates that this was not the case. There were five main causes of secession -- and the non-contiguity of East Pakistan and West Pakistan was not among them.

Secession occurred primarily because of the economic exploitation of East Pakistan by West Pakistan. West Pakistan dominated the divided country, receiving more government funding and investment than the more populous East Pakistan. As an indication of the differences between the degree of government investment in the two areas, one merely needed to look at the number of textile mills in the respective areas. Prior to the British

withdrawal, East Pakistan boasted eleven textile mills as compared to West Pakistan's nine. By 1971, the number of textile mills in East Pakistan had increased to only 26, while those in West Pakistan had catapulted to 150.²⁸⁰

A second cause of the Liberation War was the existence of political differences between East Pakistan and West Pakistan. Even though East Pakistan was more populous, political power fell into the hands of West Pakistanis. Since a straightforward system of voting would have concentrated power in the hands of the more populous East Pakistanis, West Pakistanis formulated a scheme of 'one unit,' where all of West Pakistan was considered one voting unit. This was done solely to balance East Pakistan's votes. Thus, East Pakistan was, in a manner of speaking, subjugated by the West, despite its being the more populous of the two.²⁸¹

Thirdly, there were differences in religious observance between East Pakistan and West Pakistan. The differing extent to which Islam was followed divided the territories ideologically. West Pakistan's population was 97 percent Muslim, and less liberal than East Pakistan, which had a non-Muslim population of fifteen percent.²⁸²

The fourth cause of war was the language debate that existed. In 1948, Dhaka and Urdu were declared the official languages of all of Pakistan. This proved controversial because Urdu was only spoken in the West by the Miyahir and in the East by the Bihans. The majority group in West Pakistan spoke Purjabi and Sindhi, while Bangia was spoken by the majority group in East Pakistan. The language controversy eventually resulted in a revolt by both students and civilians in East Pakistan, many of whom lost their lives.²⁸³

These factors led to the development of secessionist movements in East Pakistan, and the eventual landslide victory of the Awami League. The refusal by West Pakistan to accept the election results led to the Liberation War, which in turn led to the secession of East Pakistan and the creation of Bangladesh.

The fifth and final cause of the war was the impact of a major hurricane that affected East Pakistan. The apathy of the West Pakistani leadership and their failure to aid East Pakistan only aggravated an already tense situation.²⁸⁴

Clearly, while Pakistan had been non-contiguous, its non-contiguity had not caused its dissolution. In fact, it played no role in its dissolution. Calls for a sovereign territorial link between the West Bank and Gaza Strip and therefore, contiguity cannot point to the Pakistani experience.

A further example that could perhaps be cited by those in favor of the creation of a safe passage is that of the Danzig Corridor. However, when examined carefully this example also fails to support the creation of safe passage. Indeed, it demonstrates the threat that such passage could pose.

The Polish Corridor was a strip of territory transferred from Germany to Poland by the Treaty of Versailles in 1919. The transfer of the territory was said to be justified on historical, ethnographic, economic, and political grounds. Historically, the territory had been Polish from the tenth century till the fourteenth century, and from approximately 1453/66 till 1772, when it was transferred to Prussia. Ethnographically the majority of the population was Polish, or Kashubian (a people who consider themselves Polish). Only a minority of the population was German. Economically and politically the Poles were able to convince Britain and France that if the new Polish state did not have an outlet to the Baltic Sea, it would be economically and politically dependent on Germany. Wanting a strong Polish state, Britain and France accepted this argument.²⁸⁵

The corridor ranged from 20-70 miles wide. It separated East Prussia from the rest of Germany. Although free German transit was permitted across the corridor, there was great resentment in Germany, with all post-World War I German governments refusing to recognize the borders agreed to at Versailles.²⁸⁶ The important seaport of Danzig was made the 'Free City of Danzig' and placed under the control of the League of Nations.²⁸⁷

In 1933, the Nazi Party, led by Adolf Hitler, came to power in Germany. Initially, Hitler adopted a policy of rapprochement with Poland, even concluding the Polish-German Non-Aggression Pact of 1934. Following the annexations of Austria and Czechoslovakia, Hitler turned his attention to Poland. In early 1939, the German government intensified demands for the annexation of Danzig, as well as for construction of an extra-territorial road (under German sovereignty) through the Corridor, connecting East Prussia with the rest of Germany. Poland, with the support of Britain and France, rejected these demands. This was to no avail, as in September, 1939, Germany invaded Poland, and after Poland was under German control, Danzig and the Polish Corridor were re-annexed to Germany.²⁸⁸

Although some might see the case of the Danzig Corridor as a justification for safe passage, and argue that had there been safe passage Germany would not have invaded Poland or re-annexed the Corridor, in the authors' opinion this is clearly not the case. Germany had in fact enjoyed free transit across the corridor. The state was therefore contiguous, even though the territory used for transit was not sovereign German territory. There was no need for the German invasion based on calls for contiguity. Germany attacked not because she was non-contiguous but because Hitler's government had adopted an aggressive expansionist policy.

Therefore, this example does not support the call for safe passage between Gaza and the West Bank. In fact, it militates against such passage. The Palestinians, like the Germans, have adopted an expansionist policy, in the form of their 'phased approach.' This calls for

the overrunning and destruction of the Jewish State in phases, one of which is the creation of a Palestinian State along the 1949 armistice lines, from where attacks on Israel will be made ever easier and more effective. This phased approach is clearly stated in the Hamas charter, quoted above. With Hamas' victory in the 2006 Palestinian elections, the possibility of the staged approach being implemented becomes ever more ominous.

Clearly, the Pakistan and Danzig examples, which proponents of safe passage would cite as justification for its creation, do not justify such a passage. Nor do they suggest that a non-contiguous state is not viable.

What accentuates this point is the number of non-contiguous states that are not problematic and which do seem to be viable, far exceed these examples of past non-contiguous states that were not viable or sustainable.

Another example, geographically closer to the topic of this monograph, was a proposed solution for the conflict advanced by the British Mandatory authorities in 1937. This is known as the Peel Commission Report, discussed above. It had no compunction against non-contiguous states, and had it been implemented, it would have resulted in a non-contiguous Jewish state.

No lesser authority than the United Nations General Assembly has demonstrated its acceptance of non-contiguous states. On November 29, 1947, the U.N. General Assembly voted to establish both a Jewish state and an Arab state. Each state was to comprise three segments. Diplomats at the United Nations, representing the Jewish leadership, struggled "to make everyone see that the proposed state, in spite of its tortuous boundaries, would have some economic viability."²⁸⁹ The Jewish

leadership accepted the General Assembly's Partition Plan despite the virtually non-contiguous territories offered them. The Arab leadership rejected it.²⁹⁰

Further demonstration that non-contiguous states can function, even in the hotly-contested Middle East, was furnished by the Mount Scopus enclave in North-Eastern Jerusalem. From the July 1949 Armistice Agreement until the Six-Day War of 1967, Israel maintained an enclave on Mount Scopus. Israel retained sovereignty over the enclave even though it was completely non-contiguous with the Israeli-ruled part of Jerusalem during that time. Mount Scopus, housing the Hebrew University's then main campus, and the original Hadassah hospital, was, at the time of the 1948 War of Israeli Independence, the highest strategic point in Jerusalem. Therefore, the Jordanians had an interest in the Mount from a military point of view. The Israelis were keen to retain control over the strategically situated campus and hospital.

On July 7, 1948, Jordan and Israel agreed to the withdrawal of all troops from the Mount and their replacement with UN forces. On April 3, 1949, the parties concluded an Armistice Agreement.²⁹¹ The Agreement's Article VIII calls for the "resumption of the normal functioning of the cultural and humanitarian institutions on Mount Scopus and free access thereto."²⁹² However, under the Armistice Agreement, Mount Scopus could only be accessed once every two weeks by a convoy from Israel that traveled with a UN escort. The convoy carried a change of guards, civilian caretakers and provisions for two weeks. A typical journey was described by Professor Norman Benturich, a member of the University faculty allowed up to the campus to care for the almost half a million books. Professor Benturich says, "Having had your identification checked by a UN officer, you enter an antique bus, which is completely blinded. Two Arab soldiers with rifles enter the crowded bus. We are warned not to speak while they are with us. At the British War Cemetery on Mount Scopus where the demilitarized area of the Israel enclave begins, they alight, the shutters are opened and the passengers breathe freely. During the few hours the convoy waits on Scopus, you are free to

wander until it is time to return.” Thus, it appears that even in the hostile Middle East, non-contiguous states, such as Israel for the first two decades of its existence, can be viable.

Some states remain discontinuous to the present. Examples of current non-contiguous states that are nonetheless viable include:

- Angola is separated from its oil-rich, 158 mile-long Cabinda Province by the Democratic Republic of the Congo.²⁹³
- Russia maintains the Oblast of Kaliningrad, which is a non-contiguous enclave surrounded by Lithuania, Poland, and the Baltic Sea.²⁹⁴
- Azerbaijan includes the exclave of the Naxcivan Autonomous Republic, which is separated from Azerbaijan-proper by Armenia (an unresolved dispute exists between Azerbaijan and Armenia over the Nagorno-Karabakh region).²⁹⁵
- Brunei consists of two territories, physically separated by Malesia.²⁹⁶
- East Timor is separated from its Oecussi (Ambeno) region on the northwest portion of the island of Timor by Indonesia.²⁹⁷
- Oman controls the strategic port of Musandam Peninsula, although it is separated by territory belonging to the United Arab Emirates.²⁹⁸
- Argentina is separated from its southern region of Ushuaia by Chilean territory.²⁹⁹
- The United States is separated from its state of Alaska by approximately 500 miles of Canadian territory.³⁰⁰
- The southern region of Croatia is separated from the rest of Croatia by a 16-mile stretch of Bosnian coast.

The fact that there were and are non-contiguous states, which are viable, appears to militate against the call for a territorially contiguous Palestinian State as a prerequisite for its viability. The state, it appears, could function and maintain a separate existence without such contiguity.

Conclusion

Conventional wisdom insists that a territorial link between Gaza and the West Bank -- whether sovereign or not -- is essential for the existence of a viable Palestinian State. Thus, safe passage is called for to link Gaza and the West Bank. Indeed, the need for a territorial link of some sort is often imbedded in the call for a viable Palestinian State, the premise being that a non-contiguous state cannot be viable. This monograph's analysis reveals that the lack of a link between separated territories does not affect whether a new political community should be recognized as a state under international law. In addition, based on past and present international practice, a state does not possess an inherent right to a link between its geographically distinct areas. In particular this may be applied to the sovereign link called for by the Palestinians between Gaza and the West Bank.

Notwithstanding conventional wisdom, the need for such a link is questionable. One generally thinks that at the very least the Palestinians need to be able to transport goods between the Gaza Strip and West Bank for their state to be viable. However, this is not the case. First, there were convoys, discussed above, which affect the movement of goods from Gaza to the West Bank, and from there to Jordan. Interestingly, this was in use for ten years, despite the absence of any safe passage regime. Second, being a member of the Arab League of States and a signatory to the Arab Transit Agreement of 1977, 'Palestine' has the right of free transit across the territories of all Arab countries that are parties to the Agreement. Both Egypt and Jordan are signatories to the Agreement. They are therefore under an obligation to exempt Palestinian goods in transit from customs duties, taxes and other such charges.³⁰¹ This would surely be preferable to a safe passage with its many security checks, customs and duties. This has not been fully capitalized upon, and while "the right of the Palestinians with regard to transit transport is practiced" it is done on a "very exceptional basis."³⁰² There is no reason for this not to be capitalized upon in as much as the Arab states profess their commitment to an economically successful Palestinian State. Thus, the need for safe passage is questionable.

Not only is the need for Palestinian safe passage questionable, but also the legal basis of the demand is dubious.

International law does not require territorial contiguity. Likewise contiguity is not a requirement for statehood; not under the traditional criteria for statehood, nor in terms of modern criteria that have arisen as a result of developments in the field of international law.

Not only is such a link -- be it sovereign or not -- not required of a state by international law, but it is also not granted to states as a right under international law. Both past and present international practice confirm that states made up of geographically distinct areas have no inherent right to a special link connecting those areas, and in particular, a sovereign link. This applies to the Israeli-Palestinian conflict as well. While the largely defunct interim Oslo Agreements mentioned the creation of safe passage, none of these eight agreements conferred a right to safe passage. Perhaps more importantly, U.N. Security Council Resolution 242, the foundation of any solution to the conflict, does not call for safe passage or confer a right to safe passage.

Thus, under international law, territorial contiguity is not a prerequisite for statehood. Therefore, should the Palestinians have non-contiguous territory, this would be no bar to statehood. In fact, a bar to statehood for 'Palestine' might arise, but not because its territory would be non-contiguous. Despite their numerous allies and admirers, 'Palestine' may not satisfy the criteria for statehood because its elected leaders utterly fail to exercise effective government, or exercise even nominal

control over the Palestinian Territories. Should the Palestinians restore and sustain law and order in Gaza and the West Bank, the authors see no reason why they could not create a viable, non-contiguous state.

Therefore, those who assert that Israel is obliged by international law to create such a passage are wholly mistaken or misled. There is no such obligation on Israel. Out of humanitarian concern Israel could choose to create such passage, but it is in no way obliged to do so. Undeniably Israel's security concerns militate against her doing so. As demonstrated above, Israel is situated in an acutely threatening region with both states and terrorist organizations calling for and planning conventional and even genocidal attacks aimed at obliterating or driving out its Jewish population.

Should Israel choose to create a safe passage, she need not transfer sovereignty over such passage to the Palestinians. Indeed, the concept of international servitudes urges her to retain sovereignty over the passage itself. The legal concept of international servitudes also entitles her to terminate the use of such passage should there be a violation of the treaty that creates such an arrangement, or should the Palestinians tacitly or expressly renounce such a treaty. This is important: were the Palestinians to comply with the terms of the treaty until the first day of its implementation and then breach the treaty by, for example, smuggling Iranian missiles or Hezbollah terrorists the length of the safe passage, then Israel would no longer remain bound by any such commitments.

Moreover, and as importantly, international law justifies Israel's retaining control over the crossing points, in light of its right to self-defense and its duty to protect its citizens.

Most importantly, contrary to the inflammatory assertion by Yasser Arafat, should Israel choose not to create any form of safe passage, she would not be relegating the Palestinians to a non-viable "Bantustan" of a state. To reiterate, there is no shortage of examples of non-contiguous, yet fully viable states.

Further, 'Palestine' is endowed with rich natural gas reserves, discovered off the coast of Gaza.³⁰⁷ Contrary to what most people would imagine Gaza to be -- a dustbowl with no economy -- Gaza could yet be a new Qatar, economically thriving off its bountiful gas reserves.

In fact, as commented upon by distinguished journalist Bret Stephens, "a country's viability or 'sustainability,' is chiefly a function of the quality of governance, not the extent of terrain."³⁰³ Given this, the best determinant of a nation's viability is not its size, but according to Stephens, its democratic nature, economic structure, educational institutions and its commitment to the rule of law.³⁰⁴ The Palestinians, it would appear, as the recipient of more foreign aid per-capita than any other people,³⁰⁵ could succeed in these areas. They could also fail even with "territorial contiguity," "continuity," "connectivity" and what some world leaders deem as necessary for a "viable state."

As noted by Professor Alan Dershowitz, opponents of the two-state solution to the Israeli-Palestinian conflict often base their rejection on the fact that the proposed Palestinian State may not be completely contiguous. They reject the notion that the Palestinian State could be economically or politically viable if there is indeed to be no land link between the Gaza Strip and the West Bank. Dershowitz however sees no reason for this deeply ingrained belief. He argues that while the Gaza Strip may be non-contiguous from the West Bank, the state will still be viable. The Gaza Strip will not be isolated from the rest of the Arab world. It will be contiguous with Egypt, and because it has a seaport on the Mediterranean, it will have access to the rest of the world. Similarly, the West Bank will be contiguous with Jordan and through Jordan will have ready access to the Aqaba seaport,³⁰⁶ the Indian Ocean, and the Far East.

There is therefore no reason to believe that a Palestinian State, lacking a territorial link between the West Bank and Gaza, will not be viable, where "viable" is understood as capable of independent existence. This fact is highlighted not only by the successful, non-contiguous states that exist today, but also by what Bret Stephens identifies as essential for a state's viability.

Sovereign safe passage for the Palestinians would render Israel non-contiguous, divided into disconnected northern and southern regions. If territorial contiguity is indeed an essential feature of viability, why then has the 'threat' to Israel's contiguity attracted no public concern? Where does the risk lie, given the clear intent (and capability) of various terrorist groups to launch virtually daily attacks on Israeli civilians, and given their clearly stated objectives to destroy Israeli morale, and to entice her to respond with disproportionate force and thereby to alienate Western governments? If any state's viability is at risk, Israel's predicament, as augmented by Palestinian safe passage, deserves careful consideration. Yet, to the best knowledge of the authors, none of the proponents of Palestinian safe passage have even mentioned this.

Finally, it is essential to note that whatever non-contiguity may remain between the parts of a future Palestinian State, such non-contiguity was not caused by Israel. Indeed, calls for territorial contiguity and safe passage are beyond the maximalist Palestinian demand that a Palestinian State be established along the pre-1967 armistice lines. This is the case as prior to 1967, the West Bank and the Gaza Strip were in fact non-contiguous. Indeed, the West Bank fell under Jordanian annexation, while the Gaza Strip fell under Egyptian control. Thus, when demanding contiguity between the two, the Palestinians are in fact demanding even more than a return to the pre-1967 armistice lines.³⁰⁸

Although some insist upon a territorial link between the West Bank and the Gaza Strip, which would be in derogation of Israeli sovereignty, Israel is not required to accede to this unprecedented demand. As demonstrated above, Israel has legitimate security concerns arising out of the various proposals for implementing safe passage.

If the Palestinians were to constructively address these concerns, such as by dismantling the terror infrastructure as required by the Roadmap, Israel's anxiety could be assuaged. Israel would then be more forthcoming in bilaterally negotiating the ways and means for safe passage of Palestinian persons and goods.

In recent events, the "benchmark" proposals propelled by the United States have neglected to foresee the security threat to Israel. The benchmark proposals address passenger and cargo convoys between Gaza and the West Bank. However the document does not discuss security arrangements for these convoys. Given that

hitherto, the PA has done nothing to combat anti-Israel terror, there is not reason to believe that it would in fact keep these convoys free of arms and terrorists.

If the Palestinians desire a legitimate form of safe passage, then instead of turning to the world audience and attempting to isolate Israel, they would be better served by simply negotiating with Israel in good faith. It is on such a basis that any renewed peace process should begin. Every effort should be made to avoid the unworkable Palestinian dream of a territorially contiguous state that reserves the option of terrorism.

- ⁵⁵ Deutsche Continental Gas-Gessellschaft v. Polish State (1929) 5. A.D. NO.5, at 14-15. The creation of a Polish State was one of the Fourteen Points enshrined in the Treaty of Versailles, following World War I. Article 92 of the Treaty provided that in all the German territory that was to become part of Poland, the property, rights, and interests of German nationals should not be liquidated. Further, Article 297 (b)

stipulates that the question of private property, rights, and interests in an enemy country shall be settled according to the principles laid down in this Section and the provisions of the Annex attached. However, this is subject to any contrary stipulations which may be provided for in the Treaty itself. There is also a reservation such that the Allied and Associated Powers reserve the right to retain and liquidate all property, rights, and interests, belonging to German nationals within their territories, colonies, possessions, and protectorates, including territories ceded to them by the Versailles Treaty, and at the date of the Treaty's coming into existence.

On December 14, 1923, the Polish Committee of Liquidation, ordered the liquidation of property owned by the plaintiff company in Warsaw (former Russian territory acquired by Poland). The object of the litigation was to obtain redress provided for in Article 305 of the Treaty of Versailles on the ground that the liquidation was inconsistent with Articles 92 and 297 (b). The plaintiff contended that it was the intention of the Treaty to restrict Poland's right of liquidation to the territories ceded by Germany, that by the terms of Article 297 (b) the right of Allied and Associated Powers to liquidate was limited to German property within their territory, and that on January 10, 1920 (the date of the coming into force of the Treaty of Versailles) Poland possessed no other territory than that which Germany had ceded to her. Indeed, it was argued that at the time the territory in which the property was situated belonged to Russia, who had not then ceded it to Poland. In the alternative, even if it were assumed that there was a cession of the territory by Russia to Poland, the frontiers of the territory thus ceded were not yet delimited. The Polish state, it was argued, could not therefore be considered as *de jure* possessing the territory, since the boundaries were not delimited. The court rejected this argument.

Available at: <http://en.wikipedia.org/wiki/Guinea-Bissau> (last visited Jan. 10, 2007). The African Independence Party of Guinea and the Cape Verde Islands was formed in 1956. Using armed resistance, in 1970 the Independence Party claimed to have liberated a large part of the country, and in 1973 formally proclaimed independence. By May 1974, the 'state' had been recognized by eighty-four countries, and welcomed by the U.N. Security Council that unanimously recommended its admission to the U.N. However, the Agreement Granting Independence between Portugal and Guinea-Bissau was not concluded until August of 1974. Despite this, and thus despite the fact that Guinea-Bissau did not satisfy the traditional criteria of statehood, recognition as a state was granted to Guinea-Bissau. Id.

- ¹¹³ The complex relationship between recognition and statehood is discussed above.
- ¹¹⁴ Malcolm N. Shaw, *Territory in International Law*, 13 *NYIL* 61, 63-64 (1982). Territory has traditionally fulfilled two main functions: "the need for a shelter for security and the possibility of acting as a springboard for opportunity." However, Professor Shaw argues that whether territory alone continues to fulfill these two functions is questionable. Modern military technology, missiles included, demonstrate that while important (as will be discussed below the mere possession of territory cannot alone guarantee security. Even recognized boundaries on a map may not offer total immunity from terrorist infiltration. With regard to the second traditional function of territory, the growth of multi-national industry and organizations, and the development of international economic institutions have meant that in this regard too, the function of territory has been much diminished.
- ¹¹⁵ Charles De Visscher was a legal practitioner, who became a member of the PCIJ in the 1930s. This portion of his career ended in 1952 when he was not re-elected to the ICJ. He returned to academic life, and began writing and publishing books. While slightly dated today, his works have received universal praise.

- 149 Alan Dershowitz, *The Case for Peace 18-24* (2005). In 2000, then Israeli Prime Minister Ehud Barak, offered the Palestinians statehood in all of the Gaza Strip, and more than 95 percent of the West Bank and the adjoining land. Arafat refused the offer and therefore the negotiations failed. What is important to note is that countries do not generally enshrine offers made during negotiations that have failed. They do not subsequently maintain an offer if the negotiations of which the offer was part have failed. The offer is not the starting point for future negotiations. So too, the Israeli offer at Camp David should not be enshrined. It was colloquially 'all or nothing.' Had the Palestinians accepted the offer they would have had a state. The fact that they rejected it means that they do not have a state, and that future negotiations will not begin on the premise of the Camp David negotiations. Thus, the Palestinians could at a later date be offered less than they were at Camp David in 2000. This is a view Alan Dershowitz supports, as he says that to offer the same or more would be tantamount to rewarding terrorism.
- 150 Deborah Sontag, *And Yet So Far: A Special Report; Quest for Middle East Peace: How and Why it Failed*, NY Times, July 26, 2001. The creation of Bantustans was an aspect of the South African Apartheid State, which consigned its black population to ten separate homelands or Bantustans. This policy was based on sheer racism. While ostensibly independent entities, the Apartheid regime tightly controlled all the homelands and their external affairs.

- ²¹³ Dr. Meir Rosenne, *Understanding UN Security Council Resolution 242 of November 22, 1967, on the Middle East* in Dr Yuval Steinitz et al, Jerusalem Center for Public Affairs, *Defensible Borders for a Lasting Peace* 41, 46 (2005). Two draft resolutions were presented to the Security Council, one in French and the other, presented by the British, in English. The French text made use of the definite article "the" and called for the withdrawal of Israeli forces from "the occupied territories." Thus, the French version of the resolution seems to require that Israel withdraw from all territory that had been occupied in Israel's defensive war. The English version on the other hand intentionally leaves out the definite article, thus tacitly requiring that Israel withdraw from only some of the occupied territories. In the case of clashing texts due to language differences, preference is given to the text that was originally submitted to the UN Security Council. In this case, that text is the English text. Thus, the English text prevails on this matter.

- ²³⁹ Available at: <http://en.wikipedia.org/wiki/fatah>. Fatah was established in approximately 1958 by members of the Palestinian diaspora, including Yasser Arafat. After the war of 1967, Fatah became the dominant force in Palestinian politics. The leaders of Fatah lived in exile in Tunisia from 1982 until their return to the West Bank and Gaza in 1993. Currently Fatah is led by Mahmoud Abbas (aka Abu Mazen), and was the ruling party in the Palestinian Territories until Hamas won the January 2006 elections.

States shall refrain from the threat or use of force against the territorial integrity or political independence of a state;
States shall settle their international disputes by peaceful means;
The duty not to intervene in matters within the domestic jurisdiction of any state;
The duty of states to cooperate with one another;
Principles of equal rights and self-determination of peoples;
Sovereign equality of states; and
14. States shall fulfill in good faith the obligations assumed by them under the Charter.

The Jerusalem Center for Public Affairs

Books and Monographs

Defensible Borders for a Lasting Peace

Dr. Yuval Steinitz, Maj.-Gen. (res.) Yaakov Amidror, Dr. Meir Rosenne, and Dr. Dore Gold

Israel's rights and requirements for defensible borders, as proposed by President George W. Bush, have now been placed squarely on the global diplomatic agenda. This multi-disciplinary study focuses on Israel's minimal territorial requirements to enable it to defend itself in the post-Iraq War Middle East.

European-Israeli Relations: Between Confusion and Change

Manfred Gerstenfeld, with Frits Bolkestein, Oded Eran, Efraim Halevy, Ayaan Hirsi Ali, Josef Joffe, Ruth Lapidot, Zvi Mazel, Anton Pelinka, and Others

Fifteen interviewees from Europe and Israel discuss European-Israeli relations.

The Fight for Jerusalem: Radical Islam, the West, and the Future of the Holy City

Dore Gold

Jerusalem has been under assault. The attack on the veracity of its biblical past was only a prelude for compromising that began at Camp David. In Western diplomatic circles, including in the U.S., it is now being argued that by pushing hard for a Middle East settlement, with the redivision of Jerusalem at its core, the flames of radical Islamic rage will be lowered. Yet a redivision of Jerusalem would not only endanger its holy sites, but also unleash new jihadist momentum. (Regnery, 2007)

Jerusalem in International Diplomacy

Dore Gold

An examination of Israel's position in Jerusalem through the study of the historical record and diplomatic documents.

Iran, Hizballah, Hamas, and the Global Jihad: A New Conflict Paradigm for the West

Lt.-Gen. (res.) Moshe Yaalon, Maj.-Gen. (res.) Yaakov Amidror, Dr. Martin Kramer, Brig.-Gen. (res.) Dr. Shimon Shapira, Dan Diker, and Lt.-Col. (res.) Jonathan D. Halevi

The second Lebanon war, having erupted after Israel's unilateral withdrawal from territories vacated in south Lebanon and Gaza, has called into question whether the Arab-Israeli conflict any longer involves a territorial dispute.

Referral of Iranian President Ahmadinejad on the Charge of Incitement to Commit Genocide

Justus Reid Weiner, with Meir Rosenne, Elie Wiesel, Dore Gold, Irit Kohn, Eytan Bentsur, and Dan Naveh

Historically addressing genocide has been primarily a forensic endeavor that begins functioning when the tragedy is over. Now is the time to avert bloodshed: Ahmadinejad's incitement deserves an indictment.

Human Rights of Christians in Palestinian Society

Justus Reid Weiner

There has been nearly uninterrupted persecution of Christians in areas "governed" by the Palestinian Authority since the Oslo peace process began. Living amidst a xenophobic Muslim population plagued by endemic violence bordering on anarchy, the Christians have shrunk to less than 1.7% of the population in the Palestinian areas. "Their plight is, in part, attributable to the adoption of Muslim religious law (Sharia) in the Constitution of the Palestinian Authority. Moreover, the Christians have been abandoned by their religious leaders who, instead of protecting them, have chosen to curry favor with the Palestinian leadership," said human rights lawyer Justus Weiner, author of this study.
